Appendix 2 – Technical Report & Methodology

Appendix 3 – Electorate & Population Data Projections 2019-2027

# 1. **Introduction**

1.1.1 Liverpool City Council is required to make a revised submission to the Local Government Boundary Commission for England (LGBCE) following the recent Best Value Inspection and subsequent Directions placed upon the Council by the Secretary of State. This submission has been considered and approved by the Council's Commissioners and Full Council.

## **Summary**

1.2.1 The purpose of this report is to outline the Council's recommendation to the LGBCE in terms of proposed council size. This represents the preliminary stage in the Council's Electoral Boundary Review process.

1.2.2 The recommendation proposed by the Council is based on -

- a) [Directions](#) placed upon the Council by the Secretary of State which include the requirement of a revised submission to the Boundary Commission, involving a reduced number of Councillors and predominantly single member ward pattern and all out elections in 2023. The Directions also require a wider governance transformation and improvement programme;
- b) the future strategic vision for the city and changes in the nature of the relationship between residents and the Council which are seeking to achieve greater empowerment of local communities in designing solutions to the challenges that they face;
- c) ensuring levels of elected representation are commensurate with the challenges and opportunities facing the city;
- d) the intention to improve effectiveness and transparency of governance and decision-making arrangements in the short and medium term which will lead to opportunities for greater efficiencies;
- e) the intention to consider the required number of Councillors actively involved and serving on bodies with a role in the Council's formal decision-making structure, which is part of the governance improvement programme; and
- f) changes in the way that residents are interacting with the Council and are able to communicate with Councillors developing and implementing modern practices reflecting the aspirations of the Council moving towards a digital first organisation using technology to increase engagement in and participation with the Council.

## **Recommendation – Council Size**

**The size of Liverpool City Council be reduced from the current total of 90 Councillors to 85 Councillors (a reduction of 5 Councillors overall).**

## **2. City Profile**

Liverpool is the tenth largest English district by population and one of the principal core cities of England. A boundary review for Liverpool was last undertaken in 2004 when the population was 448,091. In 2020, its population was 500,474 with an electorate of 334,345.

### **a) Profile**

2.1.1 Liverpool's population has grown significantly over the past two decades and this trend is forecast to continue, reflecting the city's key role as a major economic driver for the city region, North West and the UK economy as a whole.

2.1.2 As a global tourist attraction, Liverpool is closely associated with popular culture and music. It has art galleries, National Museums, the Royal Philharmonic Orchestra and listed buildings and parks. Key historic landmarks include the Pier Head and Three Graces, Royal Albert Dock, St Georges Hall and William Brown Street. The city is also well known for being the home of Premier League football teams Liverpool FC and Everton FC. The Liverpool One retail development is one of the UK's largest and best quality city centre redevelopments of recent decades and has reinstated Liverpool's historic position as a leading national retail destination.

2.1.3 Following 50 years of severe economic and population decline, Liverpool's renaissance since has been remarkable. Since the 1980's the city has benefitted from substantial regeneration delivered through a combination of UK Government and EU funding alongside private sector investment. However, Liverpool remains one of England's most deprived districts, with 49% of neighbourhoods amongst the most deprived in the country. The legacy challenges of deprivation and inequality remain significant and require sustained long-term intervention.

### **b) Population, People & Diversity**

2.2.1 The last Boundary Review for Liverpool was undertaken in 2004, when the population was 448,091 and an electorate of 338,392. Since 2004 substantial regeneration has continued which, combined with natural migration has seen the population grow to 500,474 in 2020, which is an 11.7% increase.

2.2.2 Liverpool City Council Forecast Model (LCCFM) projections show that the city's population is set to reach 569,583 by 2027, with those age 17+ from which the electorate is drawn reaching up to a potential 466,894 and a projected electorate of 365,508 (see Appendices 2 and 3 for detail).

2.2.3 For electorate forecasting purposes, 2019 electorate data is used as a base line as this was the mid-point in the electoral cycle and is not artificially impacted by General Elections and Referenda or the absence of local elections. The following table illustrates population and electorate change from 2004 to 2020, and projections for 2027 -

<b>Population Change</b>	
<b>ONS Mid-Year Estimates to 2020</b>	
<b>Total Population</b>	
<b>2004</b>	448,091
<b>2019</b>	498,042
<b>2020</b>	500,474
<b>Additional Population</b>	52,383
<b>% Change</b>	11.7

<b>Electorate Change</b>	
<b>ONS to 2020</b>	
<b>Total Electorate</b>	
<b>2004</b>	338,392
<b>2019</b>	327,010
<b>2020</b>	334,345
<b>Electorate Change (from 2004)</b>	-4,047
<b>% Change (from 2004)</b>	-1.2

<b>LCCFM Forecast 17+ Population</b>	
<b>2027</b>	466,894
<b>Population Change (from 2020)</b>	58,516
<b>% Change (from 2020)</b>	14.3

<b>LCCFM Forecast Electorate 2027</b>	
<b>2027</b>	365,508
<b>Electorate Change (from 2020)</b>	31,163
<b>% Change (from 2020)</b>	9.3

2.2.4 Liverpool's demographic profile reflects its rich heritage as an international port and centre of commerce. Liverpool's status as a port city has historically attracted a diverse population from a wide range of cultures and the city is home to both the oldest black community in the UK as well as the oldest Chinese community in Europe.

2.2.5 Analysis of ONS data for 2019 shows the city's population breakdown as –

- White: 91% (86.3% White British, 1.0% White Irish, 3.7% Other White);
- Asian or Asian British: 3% (1.5% Indian, 0.7% Pakistani, 0.3% Bangladeshi, 0.5% other Asian);
- Black or Black British: 1.9% (1.1% Black African, 0.5% Black Caribbean, 0.3% other black);
- Mixed race: 2% (0.6% Black Caribbean and White, 0.4% Black African and White, 0.5% South Asian and White, 0.5% other);
- Chinese: 1.1%; and
- Other: 1.0%.

- 2.2.6 Liverpool's population is younger than England's average, with 42% of the population below the age of 30, this compares to 37% for the country as a whole. Liverpool also has a large lesbian, gay, bisexual and transgender community.
- 2.2.7 The distribution of people from BAME communities is not uniform across the city, with higher proportions seen across the traditional inner core areas of the city.
- 2.2.8 The diverse nature of Liverpool's communities is reflected in the Council's composition with 14% of Councillors describing their ethnic origin as BAME and 8% of councillors describing their sexuality as lesbian, gay or bi-sexual. The Council is close to gender balance with 51% female and 49% male Councillors.
- 2.2.9 Disabled people represent a significant number in the population, both in Liverpool and nationally. Research undertaken through the Family Resource Survey during 2019/20 shows that disability of any form affects -
- 8% of all children;
  - 19% of working age adults; and
  - 46% of people over pension age.
- 2.2.10 Data from the 2011 Census found Liverpool to be in the top 5 of places impacted by disability, with 15% of the population for both males and females reporting their daily activities limited by a medical condition. This corresponds with higher demand on social care support services as well as accessible housing, the design and structure of the physical and built environment (including highways, pavements, public transport and retail). This is reflected in casework undertaken by Councillors and the challenges experienced by a number of Councillors who are themselves disabled.

**c) Deprivation & Inequality**

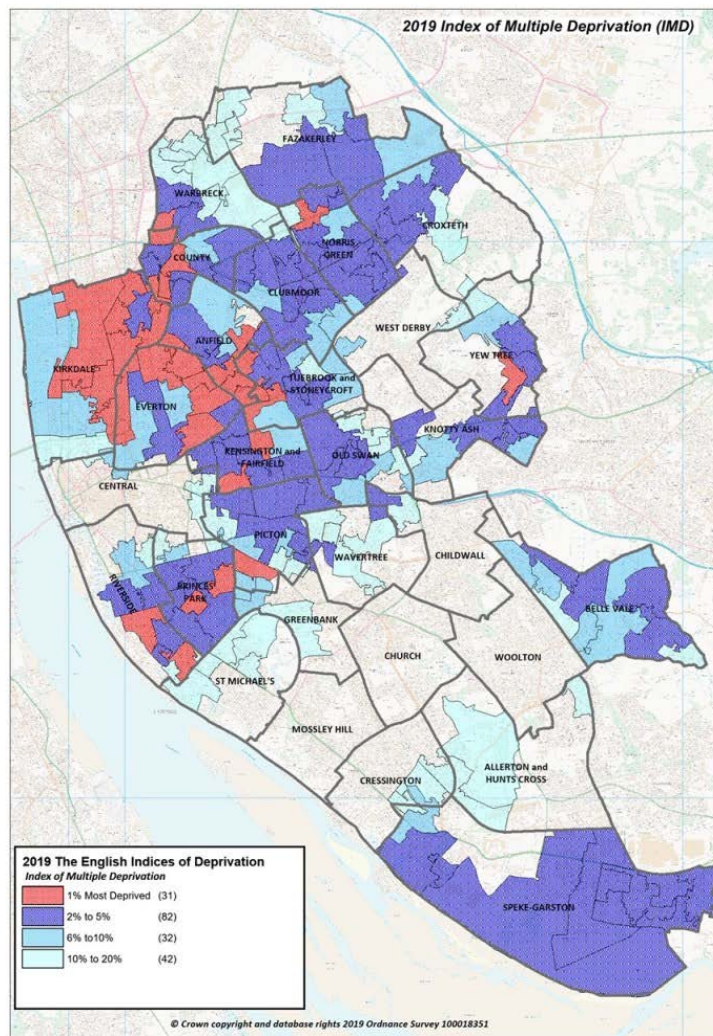

- 2.3.1 The Index of Multiple Deprivation (2019) ranks Liverpool as having the second highest number of areas in the most deprived 10% nationally. It is the 4th most deprived local authority in the country with parts of Everton, Kirkdale and County among the bottom 1% most deprived in the country.<sup>1</sup>
- 2.3.2 Liverpool's rankings nationally, based on average score for the seven indices that comprise the overall domain, were –
- Income — 4<sup>th</sup> lowest;
  - Employment — 5<sup>th</sup> lowest;

---

<sup>1</sup> The data measures relative deprivation based on 298 'lower super output areas' across the city, with an overall score based on seven different domains of deprivation, which are: income, employment, education, health, crime, housing and the living environment.

- Education, Skills and Training — 29<sup>th</sup> lowest;
- Health Deprivation and Disability — 3<sup>rd</sup> lowest;
- Crime — 22<sup>nd</sup> highest;
- Barriers to Housing and Services — 280<sup>th</sup>; and
- Living Environment — 5<sup>th</sup> lowest.

2.3.3 Of the two supplementary indices that have been produced, Liverpool is ranked 4th most deprived for Income Deprivation Affecting Children, and 8th most deprived for Income Deprivation Affecting Older People nationally. 48% of residents and 57% of Liverpool's children live in the 10% most deprived areas in the country.

2.3.4 This data underpins the high and complex caseload experienced by Councillors in the city (as shown in Appendix 1 - Councillors' Survey) and challenges in representing a diverse and modern city population. It would suggest that any reduction required in the number of Councillors should be small.

### **3. Policy Context, Challenges & Priorities**

3.1.1 The Council's corporate priorities are defined in the **City Plan**, which sets the strategic framework for local ambition and has been embraced and endorsed by all the major public, private and third sector organisations in the city. It provides the principles for how the Council works with wider stakeholders –

*“to build a thriving, sustainable, fair city for everyone”.*

3.1.2 The City Plan has six broad aims -

- To improve health and wellbeing;
- To improve education and skills;
- To develop safer and thriving neighbourhoods;
- To develop a stronger and more inclusive economy;
- To develop a low carbon, connected and accessible city; and
- To make Liverpool the most exciting city to live in and visit.

3.1.3 The other key element of the plan is to establish a new operating model of partnership working in the city – between strategic partnership organisations, and with wider stakeholders, residents and communities.

3.1.4 This operating model is founded on principles of community engagement, integrated services with greater community influence, an asset based approach, prevention/early intervention, shared resources and intelligence, and a clear commitment to tackling inequalities through prioritising the allocation of resources.

3.1.5 The Plan focusses on system change with partners, empowering local communities and individuals - changing the nature of the relationship between Councillor and communities to one of support and empowerment.

3.1.6 In response to Covid-19, an **Adaptation & Recovery Plan** was introduced and approved in March 2021, building on the foundations of the Liverpool Economic Recovery Plan and setting out the actions that each area of the Council will undertake over the next 12 months.

3.1.7 The Adaptation & Recovery Plan also sets out some longer-term trends, opportunities and thinking about how the city may evolve as a result of the pandemic over the next 2-5 years. These actions were based on a thorough assessment of the impacts, challenges and opportunities that have resulted from the Covid-19 pandemic and a set of 22 recovery assumptions. The Covid-19 crisis has served to emphasise the need to progress the City Plan's ambition as it has exacerbated many of the pre-existing challenges the city faced which have the potential to deepen if not adequately addressed.

- 3.1.8 A Council Plan is in development, which will set out how the Council will deliver against the City Plan ambitions, its transformation programmes and improvement plans. The overarching principle articulated in the City Plan is about empowering people to take control of their lives and building resilience at a family and community level to improve outcomes leading to a reduction in demand for hard pressed public services.
- 3.1.9 The Council is adopting the Golden Thread approach to business planning and performance management to ensure everyone understands how they fit in and help with delivering the outcomes. The Council Plan will set out how the Council's business planning and budget setting will take into account the need to assess decisions against a triple lock of equalities, social value and climate change.
- 3.1.10 In addition there are several plans designed to support the economic growth of the city, including -
- the Local Plan 2013-2033, likely to be adopted in the autumn, identifies the need for approximately 1,800 new houses to be built every year for the next 20 years with the accompanying growth in population and electorate;
  - the Liverpool City Deal of 2011 introduced local economic growth together with the introduction of a directly-elected Mayor; and
  - Liverpool City Region Devolution Agreement has delivered greater control and influence over approximately £3bn of national funding over an initial 5-year period, alongside increased powers and responsibilities in the key areas of economic development, transport, employment and skills and housing and planning. It reinforces the role of Liverpool and the wider City Region at the heart of the "Northern Powerhouse" and recognises the unique and significant contribution the City Region can play in driving forward the economy of the North.

### **Conclusion**

**The significance of the policy and strategic landscape for the city does not support a significant reduction in the number of Councillors. However recognising the strong and robust partnership, commitment to system change with local partners and move to empowering individuals and communities a small reduction will not negatively impact these aspirations and allows the Council to meet the requirements of the Directions.**

## **4 Strategic Leadership, Governance & Decision-Making**

Councillors are the heart of local government, providing political and local community leadership as well as helping shape the development of services, and ensuring investment and regeneration takes place for the benefit of local residents and communities. Details of the key roles played by the City Mayor and Councillors in Liverpool are explored below.

### **a) Context & Overview of Governance**

- 4.1.1 Liverpool City Council has an elected City Mayor who represents the entire city, together with 90 Councillors who in turn represent 30 wards, each of which has 3 Councillors. Councillors are currently elected by thirds each year, with a fallow year every four years when no local elections are held. In line with the Directions, the Council will be moving to all out elections in 2023 based on a predominantly a single member ward pattern.
- 4.1.2 The political composition of the Council as of 1 September 2021 comprises 67 Labour, 12 Liberal Democrat, 4 Green, 4 Liberal & Independent, 2 Independent and 1 vacancy.
- 4.1.3 As part of the Directions issued by the Secretary of State, the Council and Commissioners will be working with the Centre for Governance and Scrutiny (CfGS) to reform the Council's governance arrangements with a view to improving their effectiveness and transparency. The CfGS is supporting the Council to develop and reform its constitution and wider governance framework to ensure it addresses the challenges identified within the BVI report. This will be completed by May 2022. This work can be expected to impact positively on Councillor workload, clarity of roles and relationship with local residents and communities.
- 4.1.4 A range of opportunities were provided for members of the public to address meetings virtually during the pandemic. The Council's democracy and decision-making systems have been made accessible in a way not previously thought possible in such an accelerated timeline. It is hoped that consideration of virtual meetings will be reintroduced by Government following their successful introduction during the Covid-19 pandemic

### **b) Full Council**

- 4.2.1 Full Council typically meets up to 6 times a year, with between 6-8 weeks between each meeting There are 4 types of Full Council meeting, including –
- Annual Meetings – typically held on the third Wednesday of May following local elections and which sets the Constitutional frameworks, delegations, committee structures and Councillor responsibilities for the forthcoming year;

- Budget Meeting – this meeting is typically held no later than the first Wednesday in March, and is the meeting at which the budget – and Council Tax – for the forthcoming financial year are set;
- Ordinary Meeting – these meetings deal with a mixed range of business, including policies, plans and strategies together with motions which are typically on topical issues of local interest and concern; and
- Extraordinary Meetings – these meetings are convened for Councillors to debate single issues of special significance for the city. These may include recognising outstanding contributions of individuals or institutions active in the life of Liverpool.

4.2.2 Council meetings are usually well attended by Councillors with only minimal apologies. Public attendance varies depending on local topical issues and matters included on the published agenda for debate.

4.2.3 The Mayor and opposition leaders have agreed to review the format of Council meetings including a move to thematic policy debates to support a wider involvement in the development of the Council's priorities and objectives.

4.2.4 There is therefore no indication that there will be reduction in the number of full Council meetings.

### **c) Political Leadership**

4.3.1 The City Mayor role, established in 2012, works in partnership with Cabinet and provides political Leadership for the Council. This in turn is balanced with the role played by the Leaders of Opposition Groups who both hold the City Mayor to account as well as setting forward their ideas for the city. Details on the various roles and responsibilities are set out below.

#### City Mayor

4.3.2 The City Mayor is the elected voice for Liverpool as a city as well as the Council and is responsible for setting the overall vision for the city, acting as advocate for the city both nationally and internationally.

4.3.3 The City Mayor has a duty to set out plans and policies that drive forward economic growth in the city. Such activity includes transport, planning and development, housing, economic development and regeneration including skills (including education and schools) and employment, culture, health and a range of environmental issues including low carbon and green technology.

4.3.4 The City Mayor also plays a significant role in the Liverpool City Region Combined Authority and associated Committees, and is portfolio holder for Employment & Skills, alongside sitting on the Local Enterprise Partnership

and a mix of regional and national bodies.

- 4.3.5 The role of City Mayor is a full time position, which is reflected within the allowances regime operated and approved by Full Council. The Council passed a resolution in January 2021 to hold a referendum on its model of governance in 2022, which will inform the Council's view on the retention of a Mayoral model or a move to a different model of governance from 2023.

#### Cabinet, Cabinet Councillors & Responsibilities

- 4.3.6 The City Mayor has appointed a Deputy Mayor alongside 6 other Cabinet Members who each have an individual portfolio of responsibilities. The Mayor, Deputy Mayor and Cabinet Members work closely together on establishing and driving a range of political and strategic economic priorities, which once adopted then becomes the policy frameworks within which services are delivered across the city. There are no formal delegations of powers to enable individual Cabinet Members to make decisions – all decisions are taken collectively.
- 4.3.7 Cabinet meets on a fortnightly cycle and considers a range of complex and wide-ranging reports. The remaining core cities of England and Wales, alongside those authorities which operate a Mayoral model, all hold Cabinet meetings less frequently, typically one each month. As part of the constitutional review of the Council and wider review of Council decision-making, further recommendations will be considered on the operation of executive decision-making moving forward.
- 4.3.8 Decisions are made in public on a collective basis, and this model of collective decision-making by Cabinet provides clear lines of accountability. The City Mayor and Council also seeks to ensure that Councillors at all levels are engaged in the decision making process, with those Councillors who are not Cabinet Members all being actively involved in the Council's scrutiny process and serving in other decision making frameworks.
- 4.3.9 The City Mayor has assigned a designated portfolio of services to each Cabinet Member, as detailed below –
- ✓ City Mayor Responsibilities;
  - ✓ Deputy City Mayor & Finance & Resources (Statutory);
  - ✓ Climate Change & Environment;
  - ✓ Strategic Development & Housing;
  - ✓ Neighbourhoods;
  - ✓ Education & Skills;
  - ✓ Culture & Visitor Economy; and
  - ✓ Social Care & Health.
- 4.3.10 Cabinet Members are outward facing too and, as well as the behind the scenes working in helping keep the Council running, will regularly attend a range of ad-hoc meetings with Officers, community organisations and

businesses and partners across the public, private and voluntary sector.

- 4.3.11 Most Cabinet Members carry out their responsibilities whilst also holding full time employment - the demands and expectations of hours worked by individual Cabinet Members is high and is on top of their roles as ward Councillors.

#### Opposition Group Leaders

- 4.3.12 The role of Opposition Group Leaders in local government is recognised as complex and demanding. As well as the largest political group, the Council also has three further opposition political parties represented in its Membership comprising –

- Liberal Democrat Party;
- Green Party; and
- Liberal Party.

- 4.3.13 The role of Opposition Group Leader extends beyond the internal processes of the Council. The Leaders are key community representatives in their own right and are prominent in the political life of the city and also represent a powerful voice beyond Liverpool on many occasions transcending the traditional divisions of party politics alongside the City Mayor and other Leaders to emphasize the importance of Liverpool's issues being heard, understood and responded to.

#### Conclusion

**It is clear from the analysis above, that the Council has a significant number of strategic plans either in place or in development, set against a background of Best Value Improvement programme and sustained budget pressures. This requires strong, efficient, strategic leadership for the city and the Council.**

**Delivery of these plans in an inclusive and empowering way, requires active and responsive local Councillors ensuring the voices of all communities are heard.**

**A small reduction in council size is therefore appropriate and would not negatively impact on the future ambitions and capacity of the Council and the city.**

## **5 Accountability, Regulatory & Scrutiny Functions, Partnerships**

Whilst the City Mayor and Cabinet have responsibility for the executive functions of the City Council, all remaining Councillors are active participants in discharging Council, regulatory and scrutiny functions on behalf of the Council. Details of the key roles played by Councillors in these aspects of the Council's governance, decision-making and accountability structures are explored in this section of the report.

### **a) Discharge of Council, Regulatory & Statutory Functions**

5.1.1 In common with all authorities across England and Wales and in accordance with the requirements of local government legislation, the responsibility for functions is split into those reserved to the Executive (in the case of Liverpool the City Mayor who may delegate and assign as considered necessary), to Full Council or at local discretion.

5.1.2 A number of Council functions and responsibilities relate to the discharge of regulatory functions, such as those relating to determining planning, licensing and street trading applications.

5.1.3 The Council Constitution sets out arrangements as to how these decisions are made, through a combination of delegations to key Officers and Service Areas as well as the establishment of dedicated Regulatory Committees to discharge non-executive functions. For Liverpool these include –

- Planning Committee (which deals with 12-15% of applications, the remainder delegated to Officers);
- Licensing Committee & Sub-Committees;
- Licensing & Gambling Committee and Sub-Committees;
- Street Trading Committee;
- Audit Committee;
- Standards & Ethics Committee;
- Statutory Joint Health & Well-being Committee; and
- Environment Regulatory Committee.

5.1.4 The Constitution sets out the regulatory decisions that are delegated to officers. In practice, this is the majority of planning and licensing applications. In the case of planning decisions, the Committee will only consider applications that are of considerable public interest, large in scale or where objections have been received.

5.1.5 The Council's Regulatory Committees meet on a regular basis, reflecting the volume of complex and sensitive applications for development or licensing of premises. Even with the majority of regulatory functions, being delegated to Officers, there remains a substantial role for Councillors in determining these matters and the discharge of regulatory functions.

**b) Delegation to Officers**

5.2.1 Whilst there is an extensive range of functions and responsibilities discharged collectively by the City Mayor and Cabinet, a detailed Scheme of Delegation also exists. The Scheme of Delegations provides for a range of Executive Functions otherwise reserved to the City Mayor and Cabinet to be discharged either Sub-Committees of Cabinet or by Officers under specific delegations as set out within the Council's Constitution.

5.2.2 In addition to the delegation of Executive Functions, a range of other functions also exist which either cannot be exercised by the City Mayor and Cabinet, are reserved to Full Council or are matters where the Council has a choice over how they are delegated. These are addressed within Part 3 of the Council's Constitution and include those which -

- a) cannot be the responsibility of the City Mayor Cabinet and specifies which part of the Authority will be responsible for them. It also specifies to whom, if anyone, those functions have been delegated. For instance, in the case of planning and development control, all functions are delegated to the Director of Regeneration and Economy and/or the Head of Planning except those which are specified as being the responsibility of the Planning Committee;
- b) are classified as Local Choice Functions which may or may not be City Mayor and Cabinet responsibilities and specifies which part of the of the Council will be responsible for discharging them. It also specifies to whom, if anyone, those functions have been delegated by the Council in the case of Council functions, or the City Mayor in the case of Executive Functions; and
- c) are not solely executive responsibilities, including plans and policies reserved for determination by Full Council and which form the Council's Policy Framework are also detailed along with what role the Cabinet will play in relation to those plans, policies and strategies. Essentially, the Cabinet will develop and consult on the plans, policies and strategies listed and will then refer them to Full Council for consideration and approval. If approved, the City Mayor and Cabinet will then be responsible for ensuring they are implemented.

5.2.3 There are some decisions reserved to Full Council that cannot be delegated, except to the Chief Executive in circumstances of emergency when decisions otherwise reserved to a member body cannot be discharged, as utilised during the current Covid-19 pandemic. The Council must be able to have a process for urgent decisions within the legal framework and this has been stress-tested by the Covid pandemic.

**c) Scrutiny Structures & Councillor roles in Scrutiny**

5.3.1 The Directions to the Council require a review of the constitution of the Council. An element of this is a full and robust review of scrutiny arrangements, which is being commissioned from the CfGS to be completed by May 2022.

5.3.2 Liverpool currently has eight Select Committees, which meet on a regular basis. Liverpool's Select Committees for 2021/22 are –

- Climate Change & Environment Select Committee;
- Culture & Visitor Economy Select Committee;
- Education & Skills Select Committee;
- Finance & Resources Select Committee;
- Mayoral & Performance Select Committee;
- Neighbourhoods Select Committee;
- Social Care & Health Select Committee; and
- Strategic Development & Housing Select Committee.

5.3.3 The numbers of scrutiny committees is the subject of an annual review and work of the CfGS around best practice in terms of scrutiny will inform the numbers of scrutiny committees, their effectiveness and comparison with other Core Cities.

5.3.4 The volume of meetings and matters considered by Select Committees over the last 3 years are summarised below -

2018/19

- 52 meetings of Select Committees;
- 555 items of business dealt with; and
- 22 meetings of Scrutiny Panels.

2019/20

- 47 meetings of Select Committees;
- 446 items of business dealt with; and
- 15 meetings of Scrutiny Panels.

2020/21 (truncated schedule of meetings due to Covid-19 pandemic)

- 32 meetings of Select Committees;
- 316 items of business dealt with; and
- 3 meetings of Scrutiny Panels.

5.3.5 The role and responsibilities of each Select Committee are subject to a process of continuous review and confirmation at the Annual General Meeting of Full Council or Ordinary Meetings of Full Council as otherwise may be required.

- 5.3.6 The scrutiny process is embedded within the culture of governance and accountability operated by the Council, with each Select Committee seeing attendance from the City Mayor and Cabinet Members with relevant portfolio responsibilities, together with Directors, Assistant Directors and key Statutory Officers as required depending on the nature of business scheduled for discussion.
- 5.3.7 Each of the Council's Select Committees are able to appoint up to 2 Scrutiny Panels. Scrutiny Panels are established when a particular subject or service requires more in depth analysis and study. Scrutiny Panels comprise a smaller number of Councillors, typically 3-4 most often drawn from the membership of the appointing Select Committee and as far as possible including representatives from at least 2 political groups.
- 5.3.8 The annual scrutiny report indicates the effects and role of scrutiny on the Council, what policy and practice changes have been made and its effectiveness, such as fractional investment and the work with our partners on health and social care integration. All Councillors serve on at least one scrutiny committee.

**d) City Region Governance**

- 5.4.1 The Liverpool City Region (LCR) Devolution Agreement was implemented through a governance structure headed by a directly elected City Region Mayor, who provides strong leadership whilst also protecting the integrity and the existing role and functions of local authorities. The mayoral model is part of the LCR Combined Authority, thus maintaining the integrated approach to governance, which the City Region has worked consistently to develop.
- 5.4.2 The City Region Mayor acts as the Chair of the Liverpool City Region Combined Authority, with Councillors of the LCR Combined Authority – including from Liverpool and the other city region authorities – provides a supporting and advisory function to the City Region Mayor and Combined Authority.

**LCR Combined Authority**

- 5.4.3 The Liverpool City Region is governed by the LCR Combined Authority and its constituent Local Authorities. The LCR Combined Authority was established on 1 April 2014 and the membership includes the Liverpool City Region Metro Mayor, the five local authority leaders of Halton, Knowsley, Sefton, St Helens and Wirral Councils, the elected City Mayor of Liverpool City Council and the Chair of the Local Enterprise Partnership. Warrington and West Lancashire Councils are Associate Members of the Combined Authority.
- 5.4.4 The Combined Authority has in turn established a number of Committees to assist with the discharge of its responsibilities, including –
- Appointments & Disciplinary Committee;

- Audit & Governance Committee;
- Overview & Scrutiny Committee; and
- Transport Committee.

#### Impacts of City Region frameworks on Councillor capacity and caseload

- 5.4.5 The establishment of the Combined Authority and the associated devolution agreement saw the transfer of a range of functions and responsibilities to this new body from Government - however, this did not see functions transferred from the local authorities of the City Region which form its constituent parts.
- 5.4.6 The effect of this means that the Combined Authority - and its various Committees - place additional demands on the time, capacity and resource of those Councillors appointed to those bodies. The Mayor serves on the Combined Authority Cabinet and a number of Liverpool's Councillors serve across the Combined Authority on joint boards. Allowances, where they exist, are [published](#).
- 5.4.7 The areas of responsibility covered by the Combined Authority and the Metro Mayor do not substantially impact on Councillors capacity in Liverpool. For example, matters relating to bus and train travel may be anticipated to more often be referred to the Combined Authority as opposed to local Councillors.
- 5.4.8 Whilst the Combined Authorities and its various committees play a pivotal role in the City Region, its functions and responsibilities are distinct from those of the City Council. This has resulted in some diversion of casework issues to the Combined Authority structures, but this effect has largely been limited. It is not considered that the Combined Authority role is a factor to significantly reduce the number of Councillors in Liverpool.

#### **e) External Partnerships**

- 5.5.1 Liverpool as a city and Council does not exist or operate in isolation. Alongside the City Region governance arrangements summarised earlier in this report, a range of structures and frameworks exist or are emergent in the health, social care and public health sectors of local government.

#### **f) Local Authority Companies**

- 5.6.1 Liverpool City Council has four wholly owned companies and a number of associate companies. In line with the Directions from the Secretary of State, the Council is currently reviewing the governance and future direction of these companies. Councillors do not serve as board members on these companies at this time. The review will consider this position.

**g) Strategic Direction**

- 5.7.1 A Council Plan is in development which set out how the Council will deliver against the City Plan ambitions, its transformation programmes and improvement plans. The overarching principle articulated in the City Plan is about empowering people to take control of their lives and building resilience at a family and community level to improve outcomes leading to reduction in demand for hard pressed public services. A key element of the City Plan and Council Plan is the alignment of Council resources with partners to create a shared focus on outcomes at both a city scale and neighbourhood level with a prevention and early help model at its core.
- 5.7.2 In terms of the Council's ambitions above and the critical role Councillors will play, 85 Councillors considered a robust and strong number to enable efficient working, both in the context of the resources available and the Council's commitment to support active, engaged democracy.
- 5.7.3 The Council has historically had a large number of scrutiny committees. Going forward, whilst the number of committees may change, the Council is planning on establishing a neighbourhood model of delivery as part of the City Plan objectives and changing the relationship between the Council and residents which will involve all Councillors. The work being undertaken with regards to the comprehensive review of scrutiny, working with CfGS, will inform the Council's future governance model.
- 5.7.4 A referendum or change in governance arrangements is anticipated to be debated and agreed for implementation in May 2023, which in turn may result in changes to how the Council operates. This means that the Council will either retain a Mayoral model or change its form of governance to an alternative model to be determined by the Council.
- 5.7.5 In either case, the Council will continue to require clear, robust, transparent and accountable political leadership. In turn, political leadership is not defined as being solely a Mayor or Leader. Political leadership is vested in and delivered by each and every elected Councillor as community leaders.
- 5.7.6 Any changes will be subject to detailed reports and debate at Full Council that, by definition, will need to be led and informed by sufficient numbers of Councillors to balance multiple and complex competing factors.

## **Conclusion**

**In order to discharge statutory and regulatory functions, it is essential that there are sufficient Councillors for this purpose. A reduction of 5 Councillors would still enable the Council to fulfil its obligations and meet the vision it has for the city.**

**The involvement of Councillors in scrutiny is a critical element of effective and accountable governance in any executive decision-making model, whether at strategic or local level.**

## **6 Community Leadership & Representational Role of Councillors**

Councillors are community leaders and play an essential role for their communities. In Liverpool, this role is substantial. Not only is casework complex and substantial in number, communities are diverse. Councillors themselves have identified this workload as substantial in the Councillor Survey (Appendix 1). Although technology assists in the quick resolution of casework, it also means that Councillors are much easier to access and can result in more rather than less workload.

### **a) Community Leadership, Representation & Engagement**

- 6.1.1 The role and responsibilities of Councillors and in particular the relationship with the communities and individuals they serve is changing. At the heart of the City Plan is a desire to promote empowerment of local communities and work with our partners on an asset based model of delivery, where we build on the strengths of individuals and communities rather than say what is wrong and provide a menu of solutions.
- 6.1.2 The delivery of the City Plan will change the nature of the relationship between Councillor and communities. This will see Councillors' role as enablers expanded further, to support greater empowerment for residents and communities.
- 6.1.3 The City Plan promotes a vision of integrated service delivery at a neighbourhood level with partners, supported by workforce development and empowerment of front line staff. This model of service delivery means that while Councillors still have a vital and important role to play in their communities, the nature of caseload should be less as these structures and delivery models are implemented.

6.1.4 The development of neighbourhood structures will enhance the visibility and accountability of local Councillors who will be required to lead on the development of these neighbourhood structures moving forward.

**b) Technology, Local Government Representation & Casework**

6.2.1 The Council in preparing this report has sought to better understand the realities of Councillors roles and responsibilities. The City Mayor and Councillors were asked to complete a Survey in late 2020 (detailed results being set out at Appendix 1 to this report).

6.2.2 The Councillor Survey demonstrates the scale of work undertaken by Councillors to engage with and work on behalf of their residents and communities.

6.2.3 Key findings relating to communications and the use of technology include -

- Councillors still largely rely on more traditional communication methods, typically face to face in person, telephone or email;
- the majority of Councillors now spend over 6 hours each week publishing information on and responding to residents through social media;
- the majority of Liverpool's Councillors use social media networks such as Twitter, Facebook, Snapchat and Instagram and Councillors across all political groups report increasing use of social media as part of their role; and
- the continued development of social media and technology has greatly benefitted Councillors and local residents in providing an easy, readily available tool by which they can be available.

6.2.4 Key finding relating to the type of casework include –

- the majority of Councillors casework is on behalf of the city's most vulnerable and deprived residents and communities; and
- Councillors deal with a high volume of casework issues each month.

6.2.5 The Council is currently reviewing the operation of Councillors casework to introduce a responsive, modern case management system. Together with the Council's improvement journey, in particular in services such as highways or community-facing services, this could be positively expected to lead better management of local issues and more speedy resolution of casework.

## Attracting and retaining Councillors

6.2.6 Liverpool continues to attract a large number of candidates seeking to stand in the city's local elections. The number of candidates who stood for local elections during recent years were –

- 171 in 2011;
- 178 in 2014;
- 194 in 2015;
- 149 in 2018; and
- 152 in 2019.

6.2.7 The average length of service of the Councillors of the present Council is just over 6 years; the longest serving Councillor on the Council currently has 46 years of service.

### **c) Training for Councillors**

6.3.1 In line with the Directions, all Councillors are required to have attended and completed essential training. Any new Councillors will also have to undertake or participate in those essential training sessions. Any Councillor who does not meet this requirement is then ineligible to serve on any Select or Regulatory Committee until this requirement is met, reflecting the requirements of the Directions.

6.3.2 Following the election, all Councillors are able to participate in an intensive Induction Programme. This focusses on core knowledge and skills requirements to provide each Councillor with a solid grounding from which to build during their first year in office.

6.3.3 With direct support from the Local Government Association (LGA), Centre for Governance and Scrutiny (CfGS), CIFAS and Planning Advisory Service (PAS), a mandatory framework of core sessions has been established, relating to -

- Standards, Ethics and Code of Conduct;
- Scrutiny & Challenge; and
- Prevention of Fraud, Bribery & Corruption.

6.3.4 A standing Member Development Working Group with cross party Councillor representation is in operation, which meets as required to review training and development frameworks for Councillors and to identify areas for additional support. This will oversee, with support from the LGA, the member training programme and continuous development of elected members. The LGA will also be supporting a development programme for the leadership team. Important elements of the improvement plan for the Council will require considerable commitment from Councillors and Officers with supporting capacity and resource.

6.3.5 Moving forward, a comprehensive development and training framework will continue to be required to address the skills and knowledge requirements of Councillors as the Council's relationship with residents and communities evolves. Overseen by the Member Development Working Group, continued commitment will be required from Councillors in terms of time and effort to retain the required skills and knowledge to undertake their diverse responsibilities.

**d) Ward Co-ordination**

6.4.1 Fundamental to neighbourhood delivery is integrated services for people, communities and place. This approach in Liverpool is underpinned by an asset-based approach to ward working, where Councillors recognise the community and residents as assets with the solution to many issues they face. This also supports a modal shift in the relationship between the Council and residents, from transactional to enabling.

6.4.2 The historical approach of the Council "fixing" problems has moved to increased partnership working and co-production with communities. Whilst this approach is the right way to operate in order to achieve sustainable improvements, it is also resource intensive and Councillors representative role has as a result changed significantly over time.

6.4.3 Councillors' role within wards has become increasingly complex, challenging, time consuming - however this is vital to support improved outcomes for communities.

6.4.4 Anchor organisations within wards including Housing Associations, NHS and public sector partners, children's centres and voluntary and community sector organisations are increasingly as (if not more) central to Councillors ward activity than more traditional council services. It is vital that this is properly reflected in how the Council operates moving forward

6.4.5 Integrated Care Teams (ICTs) are well-established in Liverpool. Historically, Councillors have been involved at a strategic level through the Health and Well Being Board and the various Clinical Commissioning Groups (CCGs) across the city. However, recognition of the wider determinants of health and the broadening out of the ICTs to Multi-Disciplinary Teams which is likely to see in an increased role for Councillors in informing decisions around the commissioning of services for the communities they serve.

6.4.6 To support communities to be self-supporting and resilient and to ensure our resources are maximised we need to agree a footprint where partners can form collaborates and services can integrate resulting in reduced demand and improved service to communities.

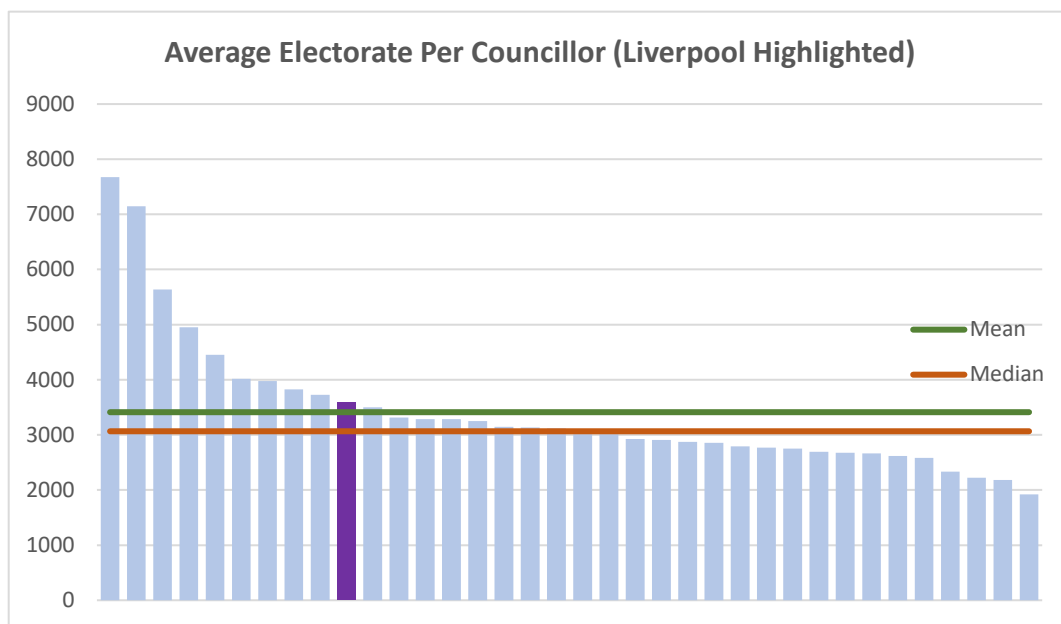

## 7 Comparison Data & Alternative Options

### a) Comparison Data

7.1.1 Comparisons between individual local authorities or core cities are of limited weight in terms of assessing the optimum council size. All local authority areas are unique with different community requirements and models of delivery and governance.

7.1.2 However, they are useful to demonstrate that the proposed council size falls within an average range of representation of cities and metropolitan districts in England. It is for these purposes that the following comparisons are suggested – firstly an analysis of metropolitan districts, mean and median levels of electorate per Councillor.

7.1.3 The chart below identifies that Liverpool's current representation levels are only slightly above the mean and median for comparator metropolitan districts.

### b) Alternative Options

7.2.1 This review is being undertaken within a unique set of parameters including the requirement within the Directions for a council size based on a reduced number of Councillors, a predominantly single member ward pattern and all out elections in 2023. The Council has committed to implementing the Best Value Recommendations and Directions placed upon it and therefore this is a core component of the analysis of options.

7.2.2 These requirements have then been balanced with the core objectives and functioning of the Council including consideration of the current and future arrangements of the Council with respect to:

- Strategic Leadership;
- Accountability; and
- Community Leadership.

7.2.3 Four options for council size have been considered and are explored below –

1. An increase in council size above 90;
2. Maintaining the council size at 90;
3. A reduction to 85; and
4. A reduction to 81.

#### Option 1 - Increasing the Council size above 90

7.2.4 This option has been discounted as a viable option for the following reasons.

- a) The last review conducted in 2004 resulted in a reduction from 99 down to 90 Councillors. Whilst this number has remained constant since 2004, the roles, responsibilities, and governance context within which Councillors are required to operate, has been subject to radical transformation and substantially differs to that seen in 2004.
- b) An increase in council size, would result in proportionate increases in the size of Committees and decision-making bodies but would see a reduction in the average population and electorate of each Ward and represented by each Councillor below that of comparable authorities.
- c) This period has also seen substantial financial pressures and budget cuts which the Council has worked hard to deliver with engagement from local communities and stakeholders. That has required trust and transparency and a commitment to deliver efficiency savings right across the Council. An increase in the size of the Council does not align with the nature of those conversations with the electorate.
- d) In additional, this would not comply with the requirement of the Directions that Liverpool submit a proposal based on a reduction in the number of Councillors.

#### Option 2 – Maintaining the Council Size at 90

7.2.5 The Council submission to the LGBCE in January 2021 proposed maintaining the council size at 90. That submission included many detail arguments which supported the rationale for a Council size of 90, including current governance arrangements, Councillor caseload, socio-economic challenges and opportunities for Liverpool as a major Core City.

7.2.6 This option has been discounted for the following reasons:

- a) accompanying the Directions, is a substantial governance and wider improvement programme with the intention to improve effectiveness and transparency of governance and decision-making arrangements in the short and medium term leading to opportunities for greater efficiencies;
- b) the intention to consider the required number of Councillors actively involved and serving on bodies with a role in the Council's formal decision-making structure, which is part of this governance improvement programme; and
- c) the requirement for and commitment of Liverpool City Council to comply with the Directions placed upon it.

### Option 3 - Reducing the Council size to 85

7.2.7 The Council has considered two options to reduce the council size which are in line with the Council's commitment to implement the findings of the Best Value Inspection report and the Directions placed upon it.

7.2.8 The option for a council size of 85 delivers a small reduction in the size of the council and the submission has set out clear arguments as to why a small reduction is both viable and would also support the Council's improvement journey. The reasons why 85 is considered the optimum number are summarised as:

- a) Future governance of the Council will be influenced by the delivery of the Improvement Plan together with the outcome of either a referendum or Council decision to change the governance model.
- b) A Continuing requirement for robust, transparent and accountable leadership (regardless of changes in a Mayoral model) which are based on a recognition of the scale of the challenges facing both the City and City Council. The size of the executive is not anticipated to reduce below the current number of eight, reflecting the extent of responsibilities of a large authority and level of change facing the Council. However, the frequency of meetings is anticipated to reduce moving forward as part of the governance programme.
- c) A comprehensive review of scrutiny arrangements has been commissioned from CfGS, the findings from which to be considered and implemented by May 2023 and which will see a reset of the scrutiny function to align with the emergent Council Plan.
- d) The Council discharges a range of regulatory and partnership functions which whilst largely delivered through delegation, still requires sufficient Councillors to discharge these responsibilities alongside the other

duties they hold as Councillors.

- e) The role of Councillor is fundamentally changing with a focus on supporting greater empowerment for residents and communities. This will see a range of new neighbourhood structures developed, ensuring visibility and accountability of local Councillors and providing an overarching structure to support our communities. This again requires capacity in terms of numbers of Councillors, time and effort which will come largely from a shift from the current scrutiny arrangements. This would support a reduction in council size but equally requires councillor support for it to be effective, meaningful and capable of adapting to differences in neighbourhoods and their communities.

#### Option 4 - Reducing the Council size to 81

- 8.3.1 A reduction to a council size of 81 which is 10% below the current council size, would comply with the Directions placed on the Council and its commitment to comply with those.
- 8.3.2 However, analysis of the future governance and strategic direction of the Council against the core components of: Strategic Leadership; Accountability; and Community Leadership have led the Council to conclude that such a significant reduction in Councillors would have significant negative impacts. -
  - a) The role and functions of the executive will remain under any council size however it is crucial that there is capacity to ensure robust, transparent and accountable leadership. A reduction in council size to 81 would inhibit the effectiveness and capacity of the Council executive, weakening strategic and political leadership and compromising community leadership.
  - b) A reduction to 81 councillors would directly impact on accountability and holding the executive to account, and the ability and capacity of the Council to discharge regulatory and partnership functions, even with the high levels of delegation already seen. Whilst there is likely to be a shift towards a reduced number of select committees and a reset of the scrutiny function, it remains critical that there are sufficient Councillors to discharge these functions whilst maintaining capacity for community leadership to develop and delivering neighbourhood structures under the Council Plan.
  - c) This submission sets out the clear aims of the City Plan and how these will see a range of new neighbourhood structures developed, ensuring visibility and accountability of local Councillors and providing an overarching structure to support our communities. These require sufficient Councillors to undertake these key roles at community and partnership level. A significant reduction to 81 means that the Council's ability to have genuine engagement with its diverse communities is weakened.

## 8 Conclusion

- 8.2.1 The Council has, in line with the Boundary Commission's requirements, produced this submission having considered and had regard to the current and future direction of the Council in these areas:
- **Strategic Leadership** - providing evidence about the current Council decision-making structure, involvement and workload of those Councillors involved as well as on the Scheme of Delegation and other bodies, and emergent future trends for governance;
  - **Accountability (Scrutiny, Regulatory Functions & Partnerships)** - providing evidence about how Councillors hold decision-makers to account and ensure that the Council can discharge its responsibilities to other organisations and how these responsibilities will evolve in the coming years; and
  - **Community Leadership** - providing evidence about how Councillors interact and engage with their communities, their caseloads and the support required to represent local residents and groups effectively and on emergent trends for the future, including how the relationship between Council, Councillors and communities will continue to develop.
- 8.2.2 It is recognised that the driver of this review has come from the Directions. A key component of these is to drive the Council's Improvement Plan and allow for a positive reset of both the Council's governance and its relationships with citizens, service users, business community and partners.
- 8.2.3 This is designed to increase transparency and trust in the Council, change the culture and enable the Council to deliver on its ambitions in the City Plan.
- 8.2.4 The Council has a positive view of the future relationship between the Council and its electorate, which is an essential part of the delivery of the City Plan, enabling and empowering local communities to do more for themselves.
- 8.2.5 The council size of 85 is an appropriate number for that relationship to develop and embed over the long term and will lead to the positive improvement in outcomes that the City Plan envisages.
- 8.2.6 The council size of 85 is an appropriate number in order for it to discharge its statutory and regulatory functions, fulfil its duty as a strategic place maker, deliver high quality and efficient services. These considerations have been made recognising the future improvements in service delivery and governance that the Council is seeking to implement.

**22 September 2021**

## Appendix 1 – Councillor Survey 2020 - Response Analysis

# COUNCILLOR SURVEY 2020

### 1. Introduction to Survey

During a 3 week period spanning late November and early December 2020, all Councillors were invited to complete an online survey analysing their roles and responsibilities and to provide their views on how their essential roles as community representatives continue to evolve. This is their story.

### 2. Term of office and responsibilities

How long have you been an Elected Member with Liverpool City Council?								Response Percent	Response Total	
1	1 to 5 years							50.00%	28	
2	6 to 10 years							25.00%	14	
3	11 to 15 years							10.71%	6	
4	16 to 20 years							7.14%	4	
5	Over 20 years							7.14%	4	
<b>Statistics</b>	Minimum	1	Mean	1.96	Std. Deviation	1.24	Satisfaction Rate	24.11	answered	56
	Maximum	5	Variance	1.53	Std. Error	0.17			skipped	0

In addition to your role as an Elected Member, what other positions do you hold within the Council? (Please select all options that apply.)								Response Percent	Response Total	
1	Lord Mayor or Deputy Lord Mayor							1.79%	1	
2	Cabinet Elected Member							16.07%	9	
3	Regulatory Committee Chair or Deputy							8.93%	5	
4	Select Committee Chair or Deputy							25.00%	14	
5	Scrutiny Panel or Task Group Chair or Deputy							8.93%	5	
6	Opposition Leader							1.79%	1	
7	Opposition Spokesperson							12.50%	7	
8	None							30.36%	17

Please give details of any other council activities to assist our understanding: (22)							
1	Deputy Portfolio Holder at LCR CA (direct appointment from CA)						
2	Womens issues for Labour Group & LCR LWF						
3	Communicating with residents with physical street letters and newsletters						
4	Due to Covid restrictions, time spent on travel to and from meetings has been reduced as all meetings are Zoom or Teams.						
5	Checking and writing emails, making phone calls and so on.						
6	Covid has reduced travel but increased the time spent on emails per day - I currently spend about 2-3						

## Appendix 1 – Councillor Survey 2020 - Response Analysis

On average, how many hours per month do you spend on council, city region and political business?							
	<1hr	1-5 hrs	6-10 hrs	11-15 hrs	16-20 hrs	21hrs+	Response Total
	hours a day on emails - but I am cabinet member for both adult social care and public health						
7	Mediation and complaints Preparing information: newsletters, leaflets, councillors letters... Informal meetings to discuss and plan ideas, projects in the community and/or with partners						
8	Currently, since the first lockdown, 8-10 hours per month assisting at a foodbank in the ward.						
9	My role as a city councillor is primarily that of community entrepreneur. I have established 8 community groups in my ward, and have developed, grown and nurtured their capacity. They have all now developed to the point of being able to deliver activities and provide services of their own, and have all successfully applied for external funding to resource this delivery. The nurturing, development and growth of community groups from scratch is very time - and energy - intensive. They have become the primary actors in amelioration of the worst effects of the Pandemic, the lockdowns and the economic crisis. Maintaining their ability to do this work during the Pandemic has seen a shift in working - with more time needed to transferred digital skill, for example.						
10	Travelling is almost none existent at present because of Covid						
11	N/A						
12	Additional duties.						
13	Planning briefs and actually reading Committee agendas can be time consuming. Actual Planning Committee can last most of the day. Not unusual to spend over an hour on one application.						
14	Writing report						
15	Business Guidance and International Relations						
16	school governor - LEA						
17	As Armed Forces Champion for the City I have many discussions and contacts relating to the present day forces families and for those who previously served who live within the City.						
18	Working with police on ASB and traffic problems Equalities work, particularly equality for disabled people Travel during Covid restrictions is much less, prior to that it was 21+ and will probably return to that when restrictions end.						
19	Community activities, litter picks, organising local events						
20	meeting with						
21	residents meetings meetings with local providers such as RSLs and Police etc						
22	Emails, policy,

On average, how many issues do you deal with from local residents each month? Issues may include emails from residents, social media queries, phone calls, matters raised at surgery or during walkabouts in your ward. If you are dealing with a whole ward issue affecting all residents, this would count as one issue even though understandably substantial.

								Response Percent	Response Total	
1	1-100							44.64%	25	
2	101-200							28.57%	16	
3	201-300							12.50%	7	
4	301+							14.29%	8	
<b>Statistics</b>	Minimum	1	Mean	1.96	Std. Deviation	1.07			answered	56
	Maximum	4	Variance	1.14	Std. Error	0.14			skipped	0

Please tell us about any other casework issues below: (26)				
1	Spend most of time dealing with housing issues, rats and waste.			
2	Most issues are environmental and street services issues , many requiring direct intervention / physical resolution by cllrs plus also very large number relating to ASB and noise due to large student population in ward, again requiring direct intervention eg door-knocking residents			
3	* Providing food and essential supplies to vulnerable residents * People needing to be re-housed * Problems with managing agents in leasehold properties			
4	Currently much of my time is spent helping advise constituents and local businesses on Covid-19 related issues.			
5	Housing issues which are not related to homelessness but could be overcrowding or complaints from the private housing sector.			
6	immigration, pest control, Car Parking, speeding, lack of dropped kerbs. Dog fouling.			
7	dog fouling poor housing conditions HMOs Cladding parking covid poverty lack of food lack of clothing/shoes			
8	Criminal activity Environmental issues and projects School admissions and allocations Support for community projects and activities			
9	At some point in my 4yrs on the council I have dealt with all of the above on at least one occasion. However, I think the most regular casework which residents contact me over is income and benefit issues because they are facing financial hardship - housing matters relations to a registered social landlord or a private landlord - highways and foot paths and fly tipping and illegal dumping in the area.			
10	There are many cross-cutting themes. Sourcing the reprovision of services that previously were delivered by the Council, but have been cut or ceased due to budgetary retrenchment, has been the major theme.			
11	This clearly varies according to time of year			
12	Poverty and support			
13	Youth work issues Other anti-poverty measures such as food bank issues Social Housing issues			
14	Organising problem Solving Group (PSG) Attending public meetings			
15	Housing issues			
16	Enquiries about grants and assistance for local businesses			

## Appendix 1 – Councillor Survey 2020 - Response Analysis

What types of casework issues do you typically deal with? (Please categorise each option as appropriate and tell us about any other issues below.)		Most often	Least often	Response Total
17	conservation area			
18	Immigration, food shortages and food banks, housing,			
19	Anti social behaviour Businesses needing support Heritage, conservation area, listed buildings traffic speeding and congestion. Leisure services / sports / culture			
20	Regeneration			
21	HMO Developers dumping			
22	Business related issues e.g. business rates			
23	All those stated most often are the day to day most relevant issues within the ward			
24	Community regeneration			
25	The most common type of casework I deal with is to do with what I would categorise as 'Housing'. This is often to do with disputes with housing associations or landlords.

## Appendix 1 – Councillor Survey 2020 - Response Analysis

### 8. Types of casework and issues raised by residents

The Covid-19 pandemic has now been ongoing since February 2020 and has affected all aspects of life across Liverpool. Please tell us which of the following issues you have seen most as a result of Covid-19. (Please categorise each option as appropriate and tell us about any other issues below.)			
	Most often	Least often	Response Total
Income and benefits issues	89.3% (50)	10.7% (6)	56
Employment issues	66.1% (37)	33.9% (19)	56
Schools and education	67.9% (38)	32.1% (18)	56
Children's social care	37.5% (21)	62.5% (35)	56
Adults' social care	66.1% (37)	33.9% (19)	56
Mental health issues and support	76.8% (43)	23.2% (13)	56
Physical health issues and support	55.4% (31)	44.6% (25)	56
Homelessness	44.6% (25)	55.4% (31)	56
Planning issues (for example, applications, objections, disputes)	55.4% (31)	44.6% (25)	56
Licensing issues (for example, complaints over applications)	37.5% (21)	62.5% (35)	56
Highways complaints (for example, road maintenance)	64.3% (36)	35.7% (20)	56
Home waste and recycling collections	64.3% (36)	35.7% (20)	56
Street waste and recycling	75.0% (42)	25.0% (14)	56
Illegal dumping	80.4% (45)	19.6% (11)	56
Alleygates	35.7% (20)	64.3% (36)	56
Street lights	33.9% (19)	66.1% (37)	56
Parking problems	66.1% (37)	33.9% (19)	56
Anti-social behaviour	73.2% (41)	26.8% (15)	56
Noise and nuisance issues	71.4% (40)	28.6% (16)	56
Parks and greenspace issues	58.9% (33)	41.1% (23)	56

## Appendix 1 – Councillor Survey 2020 - Response Analysis

The Covid-19 pandemic has now been ongoing since February 2020 and has affected all aspects of live across Liverpool. Please tell us which of the following issues you have seen most as a result of Covid-19. (Please categorise each option as appropriate and tell us about any other issues below.)

	Most often	Least often	Response Total
Verge cutting and leaf collection	35.7% (20)	64.3% (36)	56
Other	33.9% (19)	66.1% (37)	56
		answered	56
		skipped	0

Please tell us about any other casework issues during the Covid-19 pandemic below: (19)

1	<p>Covid has meant same issues being the most complained about - but is much more of them, literally because people are at home more , and using very local services and resources more - eg liverpool parks</p> <p>Some specific new tasks were added to cllr workload in lockdown - eg delivering food parcels, and speaking to the isolated people in need of support also.</p> <p>Also more local environmental work - eg supporting alley-greening projects , as people at home more and trying to utilise all local space as much as possible</p>
2	<p>* Support with delivering food and essential supplies</p> <p>* Support for vulnerable local businesses, particularly in the hospitality sector</p>
3	<p>Many constituents and businesses asking me for help and advice regarding ever changing Covid-19 rules, testing and financial support.</p>
4	<p>poverty and family food poverty. Ensuring parents can be supported.</p>
5	<p>All the normal types of casework continue at their usual level, apart from Highways cases, which have increased. However, on top of these, we have had a massive increase in people in financial difficulties, due to being furloughed, or left without help, as in self employed and others. As such, the workload has actually increased significantly.</p>
6	<p>poverty</p>
7	<p>Testing and information about testing</p> <p>Foodbank referrals</p> <p>Computers/wifi for children and families to work from home</p> <p>Isolation and the behaviour of the most vulnerable eg alcoholics and substance abusers</p>
8	<p>helping dependant businesses with applications, also self employed with applications. getting informatin on cocid numbers and testing sights</p>
9	<p>Without a doubt, the pandemic has resulted in a increase in casework. given the rise of staff absences in the council which inevitably resulted in a reduction in council services, my experience is that residents started contacting us more because they seen the grass verges weren't getting cut, the green bins weren't being emptied at the start of the pandemic for a number of months. Also, the waste recycling centre were closed so fly tipping increased which resulted in residents contacting me directly to report these incidents.</p> <p>Families were also getting in touch more about not being able to visit loved ones in care homes due to the pandemic. or they were contacting to express concern about their child returning to school after the first lockdown.</p> <p>without a doubt, the contact from residents has increased this year as services haven't been running as they normally.</p>
10	<p>Foodbank issues</p>
11	<p>Housing issues</p>
12	<p>Again business guidance and financial support</p>
13	<p>foodbank referral</p>

## Appendix 1 – Councillor Survey 2020 - Response Analysis

The Covid-19 pandemic has now been ongoing since February 2020 and has affected all aspects of live across Liverpool. Please tell us which of the following issues you have seen most as a result of Covid-19. (Please categorise each option as appropriate and tell us about any other issues below.)

		Most often	Least often	Response Total
14	The number of families and individuals losing their jobs or having hours reduced has seen a huge amount of request for assistance with financial matters and food poverty. The lockdowns, though necessary, have led to many small business's in the area facing closure.			
15	Providing care packages for isolating or reduced incomes Cycling routes and wanting improved provision			
16	We are supporting community centres with food provision In my cabinet role I am dealing with barriers that are created for disabled people due to highways changes such as pavements being used for outside seating at restaurants, cycle lanes and e-scooters.			
17	HMO Developer dumping building waste			
18	One of the main issues during Covid was ensuring the community had access to food. Plus an increase in 'Housing' issues			
19	A particular increase in people asking us about local issues such as street cleansing and alleyway maintenance, particularly as people are spending more time at home. Concerns about schools have increased.

# Appendix 1 – Councillor Survey 2020 - Response Analysis

## 9. Realities of life as an Elected Member

**Based on your experience, is the time you spend on Council work each week what you expected when you first agreed to stand for Election?**

								Response Percent	Response Total	
1	Yes							16.07%	9	
2	No, I spend more time than I expected							82.14%	46	
3	No, I spend less time than I expected							1.79%	1	
<b>Statistics</b>	Minimum	1	Mean	1.86	Std. Deviation	0.4	Satisfaction Rate	42.86	answered	56
	Maximum	3	Variance	0.16	Std. Error	0.05			skipped	0

Comments: (25)

1	Lots of urgent cases, particularly during the Covid-19 pandemic. I have had calls from residents after midnight. Lots of residents want to meet with me to discuss their issues rather than just address them via email.
2	I was aware of the expectations of councillors, because i have long been involved with elected representatives through both my activism in the Labour Party and my previous professional work supporting elected reps (national and local). Im aware the level of obligations are a shock to most cllrs! I went part-time in my professional job when i was elected as a cllr (2011), and then had to leave my job completely when i was appointed to Cabinet (2019)
3	It takes over your life. A councillor's work never ends, even if you are able to work at it full time. You prioritise doing what is most essential in the time you have available. Often when you set aside time for family etc, someone will contact you with a crisis that most take priority.
4	I have always treated it as my primary occupation. I think that's what the voters would expect.
5	Case work and council work takes more time than you would think. I put in more hours than some one with a full time job could do. I do 7 days a week and it takes more time being a councillor with only one years experience compered to some one with 10-15 years experience, who would understand the protocols quicker and be more knowledgeable of the city council officers.
6	Never expected this much workload
7	The amount of chasing for updates and work to be done is frustrating
8	but more information needs to be given to new selected councillors on how many sub committees they will be asked to attend
9	Some of this is due to my volunteering to be on a very preparation- and meeting-heavy committee (Planning), partly because I have the availability during the day to attend meetings that many who work cannot.
10	though, there are times throughout the year were I find myself spending more time doing council work than I usually do. it is difficult to measure as there is no one week the same, one week I might spend 4hrs doing council work and the next I might spend 30hrs due to demand.  I ticked yes but I do think there are times during the year were I feel like I need to set aside more time to make sure I either catch up on things or don't fall behind.
11	In so far as I can remember what I thought when elected in 1975!
12	I spend a lot more time than I was expecting, as this increases with more time. I often get stopped in the street, on phone calls, emails and on my personal social media.
13	
14	I don't know what I expected but to do this role well it could be a full time job.

## Appendix 1 – Councillor Survey 2020 - Response Analysis

Based on your experience, is the time you spend on Council work each week what you expected when you first agreed to stand for Election?

		Response Percent	Response Total
15	I spend much more time than expected- it is a full time job if you take it seriously.		
16	It could very easily be a fulltime job.		
17	I've been in office previously in another local authority and have spent many years with councillors and MPs, MEPs etc. The big different nowadays is the immediacy of it all. People want an answer at a click of a finger. This is mostly fueled by social media. For example if one person posts something on Facebook group about anti social behaviour, you're instantly tagged and with a space of an hour, everyone's sharing their story or demanding answers from you. Doesn't matter what time of the day, or day of the year. If you don't act quickly things can quickly get out control or context and affect the credibility of the elected member.		
18	we are visible and accessible		
19	I work full time on Council business, many meetings start at 5 pm. I receive about 200 emails a week including round robins which I delete straight away.		
20	Work in the ward has grown year of year and now social media has expanded that again, easy to contact councillors media posting alerts you more quickly and gains a wider audience that requires a greater and wider response also the needs and requirements in my ward require attention as the needs grow larger		
21	There is nothing that you can do to prepare yourself for the amount and divers council work that you are expected to undertake as part of your role.		
22	The ward has grown, and while there are new housing development in the area. This is sometimes not taken into account when looking at the case load and the geographical footprint. Notably, there are hundreds new 7-8 bed HMO which bring as many issues and case work for us as elected Councillors for the area.		
23	Time spent on flytipping and the issues on the issues of HMOs		
24	I knew it would be a lot, but it's often much more		
25	Agreeing to become an elected representative has had a negative impact on my career prospects - a number of employers have been put off by my being a councillor. This was exacerbated by the loss of access to the local government pension scheme shortly after I was elected.		

## Appendix 1 – Councillor Survey 2020 - Response Analysis

Has the time you spend on Council work increased since you were first elected?										
								Response Percent	Response Total	
1	Yes							96.43%	54	
2	No							3.57%	2	
<b>Statistics</b>	Minimum	1	Mean	1.04	Std. Deviation	0.19	Satisfaction Rate	3.57	answered	56
	Maximum	2	Variance	0.03	Std. Error	0.02			skipped	0
Please add a comment: (38)										
1	I work in a ward in a poor area and at times have been the only councillor working.									
2	Certainly since Covid-19									
3	<p>My own responsibilities have increased as im now in Cabinet - CMs are still ward councillors as well of course, it is not instead!</p> <p>ALSO the level of austerity faced at LCC - with massive decrease in Neighbourhood staff in particular, has meant all cllrs have had to do more Health emergency has now added to the workload...</p>									
4	I get more planning enquiries since I became Chair of the committee									
5	<p>Staffing reductions have led to a greater share of the workload being transferred to elected members, both in the ward and in the council. More community &amp; business engagement/consultation is having to be carried out by councillors themselves. The opposition office now consists of 1 part time staff member. This means there is no casework or research support. The volume of contact from residents has increased dramatically over the past 20 years. Email and social media now makes it far easier for constituents (and non residents) to contact you with complaints that they might not have bothered with when they had to phone or write to you. There is an expectation of a far faster response and follow up 24/7 on any day of the year. The growth of websites encouraging people to instantly send standard emails to elected representatives without any thought or effort from the sender. Often these can be on unfamiliar issues, resulting in the need for considerable research before it is possible to write a reply.</p>									
6	this seems to be a job which could take all your time and never seems to end. Emails are endless and has grown exponentially since I was first elected.									
7	As above, recently, due to Covid but also with having a position of responsibility.									
8	The pandemic has acted as a catalyst on issues such housing employment , waste which means lots of these issues have been reported all at once rather than spread out.									
9	I am a cabinet member in a complex portfolio so it's currently exhausting and unrelenting! Also I have a full time job too.									
10	Covid and generally too									
11	mostly on housing benefits, council tax and universal credit									
12	As residents have got to know me, they have come with more issues and requests. More organisations ask for assistance or for me to be on their board of trustees etc. I have agreed to take on more responsibility over time.									
13	With time the work increases, the more you develop and your profile builds in your ward the more work this generates.									
14	We now have to a lot of ward work which would previously be done by staff.									
15	We dont have the support we used to have ie officers									
16	As time has went on, residents expect more from their Councillors and therefore the casework increases.									

## Appendix 1 – Councillor Survey 2020 - Response Analysis

Has the time you spend on Council work increased since you were first elected?			
		Response Percent	Response Total
17	<p>Yes as I have taken on more responsibility, particularly at a city region level.</p> <p>also the impact of funding cuts to the council has meant that there are more issues we have had to deal with such as anti-poverty issues, and with less officers we have had to cover more of the basic administrative duties regarding case work that we did in the past.</p>		
18	I think with internet/emails and social media Councillors are more in the public eye and consequently the work load does increases significantly.		
19	As I have become better known in the ward, the amount of casework has increased. My workload ha also increased as a Cabinet member		
20	Social media, austerity and COVID-19 have all increased workload. Social media has increased the accessibility of councillors. Austerity has meant we have been increasingly doing things that officers would have done in the past or we'd have had officer support to do. COVID-19 has made things even more hands on, more community leadership.		
21	As relates to Cabinet role and appointments to other bodies.		
22	Yes, the more you know the more there is to do.		
23	<p>Yes. Please see previous answer. Without a doubt work has increased.</p> <p>Largely I take to doing a lot of things myself. For example literally painting benches or removing leaf fall or organising clean up days.</p>		
24	<p>more responsibility.</p> <p>more known - seen out and about, at school etc</p>		
25	With the decline of budgets the number of neighbourhood officers for my ward has been drastically reduced. As one of the deprived wards within the City with a high proportion of private landlords in a high density of terraced housing, unemployment, physical and mental health deprivation. All these linked with a lack of opportunity leading to a lack of confidence leads people to make a complaint rather than having the confidence to deal with it themselves		
26	<p>I was much busier with training and getting to understand the role and it took me longer to read and prepare for meetings. Now I am more established I can do things slightly quicker though still significant demand.</p> <p>I have also had different roles so I was much busier when I was a mayoral lead.</p>		
27	Being a cabinet member is time consuming.		
28	as above		
29	We now have a less officers than when I was first elected in 2011. The biggest impact on Neighbourhood officers resulting in Cllrs taking on more work.		
30	The longer you serve as a councillor the more work that you would do and the more complex it becomes.		
31	budget cuts-cove 19		
32	<p>The ward has grown, and while there are new housing development in the area. This is sometimes not taken into account when looking at the case load and the geographical footprint.</p> <p>Notably, there are hundreds new 7-8 bed HMO which bring as many issues and case work for us as elected Councillors for the area.</p> <p>Plus there are higher levels of deprivation in some parts of the ward with families requiring multidisciplinary interventions.</p>		
33	<p>Yes, due to the Council/Cabinet member giving insufficient consultation periods on cycle lanes on West Derby Road. Getting bombarded off angry residents for a scheme we only got consulted the day before.</p> <p>Yes, due to inadequate consultation, briefing by Council Officers/Cabinet members with the community for a childrens centre at Tynwald Hill.</p> <p>Yes, due to Liverpool City Council failing until recently, give local area a testing site, which seen multiple queries about it.</p>		

## Appendix 1 – Councillor Survey 2020 - Response Analysis

Has the time you spend on Council work increased since you were first elected?			Response Percent	Response Total
34	This is partly as a result of the fact that I no longer have paid employment, enabling me to spend more time on dealing with Council work more thoroughly that would have been the case from 2014-15.			
35	HMOs and the amount is severely impacting on the community			
36	Amount of work related to ward issues and case work.			
37	During the Covid-19 pandemic.			
38	As I become more well known by my constituents and develop relationships, along with the lack of funding for other support services such as CABs, people have become increasingly reliant on my intervention.			

Which aspects of your role as an Elected Member have changed the most? (Please categorise each option as appropriate and tell us about any other aspects that have changed below.)			
	Most change	Least change	Response Total
Attendance at Council Committees (such as Planning, Select)	28.6% (16)	71.4% (40)	56
Attendance at other Council meetings (such as meetings with officers)	51.8% (29)	48.2% (27)	56
Attendance at City Region, Local Government Association (LGA) or NW Employers meetings or activities	21.4% (12)	78.6% (44)	56
Time spent on party or political business	39.3% (22)	60.7% (34)	56
Attendance at outside bodies	28.6% (16)	71.4% (40)	56
Community commitments and representation (for example, community engagement such as surgeries, street surgeries, home visits, walkabouts, phone calls etc)	82.1% (46)	17.9% (10)	56

## Appendix 1 – Councillor Survey 2020 - Response Analysis

Please tell us about any other aspects of your role that have changed: (16)	
1	Covid-19 has meant less travelling to meetings etc ALL other aspects of work continue to grow....
2	As have taken on more responsibility I spend more time on committee & regional work. My community engagement was already great in order to get elected & it has stayed fairly stable. I am using social media & the press more & more especially to get out the word during lockdown, also we are forced to travel less with virtual meetings.
3	I have always been fully committed to my role. This has not changed.
4	Not meeting other councillors as often face to face, not have face to face full council meetings. Access to administration printing being limited to requesting it rather than as and when you want to do it, though this has now been improved.
5	covid means 95% is online now - but casework for me comes from whole city and beyond relating to social care and covid public health response (and media stuff relating to it)
6	dealing with poverty and delivering food and clothing to people
7	My role has changed substantially as I have taken on more additional roles. I used to work full time as well as being a ward councillor now I work full time and much more (evenings and weekends) being a ward councillor and cabinet member. Social media has developed during my time as a councillor and is an additional demand on my time. Emails are a massive part of the workload of a modern councillor...
8	more work and attending more sub committees, more working with council offices on ward walk about
9	The role is now much more community-focussed, with less importance given to the work in the 'Town Hall'
10	Forever conscious that you are in the public eye , a community champion and role model.
11	Writing and reading reports
12	With the reduction of operational staffing due to austerity I've seen a significant increase in elected members being expected by residents to do more to provide them with similar or better levels of service. Plus, the increase in use of social media means that residents appear to expect faster responses from members and solutions to their issues. It has become very obvious that being an elected member has become a more practical operational and a perception of a less time available for political activism.
13	more virtual meetings which has helped as a woman who works shifts, and has caring responsibilities, but can be more intense too, in terms of concentration, preparation.
14	With the number of supportive community groups declining I am now dealing with issues such as financial, physical and mental health, legal, employment, to name just a few that in the past would have been referred to voluntary groups such as L8 and Vauxhall law centres, these plus the closures of many C.A.B.'s and the amount of time spent on food poverty has fundamentally added to our role of councillor. I am thankful for the skills and knowledge I acquired as a social worker that have helped me support some of those residents who have over the last couple of years been close to giving up due to the huge impact Austerity has had upon their lives
15	Covid 19 arrangements have created additional problems for disabled people, my role is to improve inclusion and access, these changes have done the opposite. There are some things I was working on previously that are progressing.
16	referring process of reporting and supporting residents. Taking phone calls.

## Appendix 1 – Councillor Survey 2020 - Response Analysis

On average, how many hours per month do you spend on the following methods to engage with residents and your community?							
	<1hr	1-5 hrs	6-10 hrs	11-15 hrs	16-20 hrs	21hrs+	Response Total
Please give details of any other engagement methods you are using: (22)							
1	I do a lot of door-knocking and delivering hard copy information as a cllr usually, during lockdown this reverts to more communication via social media and more email newsletters... The total amount of time spent communicating with residents remains constant						
2	A weekly email newsletter to over 1000 residents in my ward, and a community Facebook page that is updated several times a week						
3	Types of contact have changed massively during Covid, there are far less face to face meetings with residents. I would normally expect to attend residents groups and public meetings but none of these are happening now.						
4	coivid has stopped most face to face contact						
5	coivid has stopped most face to face contact						
6	food banks and food co-ops						
7	Site visits with residents and/or officers Attendance at community events Community engagement street stalls / door knocking / surveys Specific appointments with residents						
8	every six weeks getting leaflets out into the ward, walk about						
9	I have also been holding digital surgeries over Skype and Facebook whilst hiding the residents details in order to answer commonly asked questions.						
10	Leaflets with tear off slips for complaints, community engagement eg - Neighbourhood Watch Schemes, Home Compost Projects						
11	Zoom meetings						
12	Quarterly newsletters with 3 different additions, monthly newsletter to Labour Party members and supporters, numerous street letter (900 a month), several social media posts a day.						
13	Use of Zoom, Teams and FaceTime						
14	housing associations, community groups						
15	Due to COVID the time spent on face to face meetings, walkabouts etc have greatly reduced due to non-contact						
16	Less 'in person' during Covid restrictions, but this is happening with video conferencing instead.						
17	I'm shielding so walkabout and face to face meetings haven't been possible						
18	NONE						
19	Due to Covid I don't meet residents in person, but arrange virtual or telephone consultations. Prior to Covid I would spend at least 10hrs per month meeting people.						
20	In person contact is pre covid.						
21	During the Covid-19 pandemic, time spent in person has specifically decreased because of lockdown restrictions.						
22	Surgeries

1	The amount of online communication continues to rise - email and social media The amount of in-person communication depends on lockdown etc					
2						
3	i'm ignoring covid in the response above - ie it relates to pre covid situation					
4	i'm ignoring covid in the response above - ie it relates to pre covid situation					
5	Virtual meetings Socially distanced outdoor meetings The use of photographic evidence eg fly tipping images from residents					

## Appendix 1 – Councillor Survey 2020 - Response Analysis

Have you noticed any significant changes in the amount of time you communicate via these methods in the last 2 years?		Significantly more time	More time	About the same	Less time	Significantly less time	Response Total
6	n/a						
7	I spend lots of time now in 'virtual' meetings with residents and community groups (although I had to train community leaders in teleworking skills to do so)						
8	Knocking on doors, telephone canvassing						
9	Reading and writing reports, cabinet briefings						
10	I regularly deliver leaflets and knock on doors (pre Covid) throughout the week. Residents are kept in touch via newsletters and street letters which have my email address and both mobile and landline numbers by which residents are able to contact me.						
11	Tele-conferencing						
12	I have been using twitter and facebook for more that 2 years.						
13	I've only been elected for one year						
14	This information excludes the impact of Covid-19 on engagement, i.e. was true up to mid-March 2020.						
15	Prior to Covid, I would meet with people in person frequently, however I have arranged for virtual and telephone contact.

### How has social media, and instant communications such as email, impacted on how you undertake your role and on your life outside the City Council?

			Response Percent	Response Total
1	Open-Ended Question		101.79%	57
1	Yes			
2	It has been a really useful tool to communicate with others and receiving information during lockdown.			
3	It has been a major source of communication from Council staff & residents.			
4	Considerably easier to engage with a wider audience and deliver messages and information. I have set up neighbourhood watch groups online, one with 18,000 members in the community which has been great.			
5	It is constant, and one could do cllr role all day every day if you dont set your own boundaries			
6	The email volume gets greater every year. I spend more time on social media (Facebook) as more community & political groups use it. I have always done a weekly street letter to residents but never miss it now & phone canvas more as we cannot doorknock during the lockdown			
7	I spend a large amount of time reading and responding to emails, likewise Facebook			
8	The volume of information from the council has increased. Often it is repetitive, but you still must check it in case something new is mixed in. Email leads to far more residents making contact at any hour of the day. Council Officers are also overloaded with emails, meaning councillor enquiries can frequently get ignored or lost. I spend a lot of time chasing up emails sent weeks or months earlier which officers haven't responded to. This means I also have to deal with irate constituents, who assure I haven't kept my promise to take up an issue. Social media is probably the worst, and expects an almost instant response. It encourages casual, poorly thought out and sometimes aggressive messages, which often lead to far more work to properly understand the nature of the problem . A good portion of these contacts are not even from your constituents, but there is often no easy way of separating these from the people who you have a duty to respond to.			
9	There is much more email than previously which makes Councillors much more accessible.			
10	It hasn't because I always prioritise my Council work, to the point of not accepting other work, when there is a clash.			
11	You are under scrutiny 24hrs a day, 7 days a week, 365 a year. As an ambassador for your community and city at all times, even when you are on your own time, people expect instant replies to problems and want to hold you to account for the central and local government polices, this takes getting used to.			
12	massively - it takes up most of my time (if you also include teams/zoom briefings with officers)			
13	massively - it takes up most of my time (if you also include teams/zoom briefings with officers)			
14	it is non stop and people expect instant responses			
15	It has taken over			

## Appendix 1 – Councillor Survey 2020 - Response Analysis

How has social media, and instant communications such as email, impacted on how you undertake your role and on your life outside the City Council?			
		Response Percent	Response Total
16	yes, massively due to Covid - a lot of work done online		
17	Yes alot as people expect to find all their ward information on social media whatever the time. You are constantly on duty of you are social media  You are expected to ebe available 24 7		
18	Yes, Facebook in particular. New groups are developing constantly. Pressure to respond instantaneously is high. Maintaining a high profile has become essential and resident expectations are significant.		
19	yes it's taken up more of my time as residents email at weekends		
20	It has meant that residents have further means to contact me -- sometimes this is good, but occasionally it means that residents decide to complain about the council/their Cllr very publicly and this can get in the way of dealing straightforwardly with an issue.		
21	Since being elected I set up a Cllr Facebook page which has become a really effective way to communicate with residence - I've developed a good base with lots of interaction and residents use it as a platform to get in touch over local issues.  In addition to this I deal with all casework via email or phone but I will always email the resident to inform them of a outcome if they have email. in the rare occasion they don't, I will call them.		
22	It's (almost) a 24/7 reactive service now (sleep does intrude).		
23	We have all become much more accessible and constituents and others want quick replies.		
24	Easier two way communication, but an additional contact channel for residents		
25	I'm far busier than I ever thought I would be. It means issues can be dealt with much quicker, but it's a toll.		
26	We know have access to emails24/7 so you tend to respond more often		
27	Incredibly so! I can honestly say I receive at least 4 or 5 messages on Social Media a day with various issues as well as being 'tagged' in posts on Social Media for issues that require attention. I even receive messages at 2-3am from people messaging requiring assistance.		
28	In many ways it has helped to deal with issues more instantly, however it also means that it has increased activity outside traditional work hours. particularly greater use of text messages and whats app have significantly increased this.		
29	Yes, 24 x 7 always accountable.		
30	It's made it much harder, Cllr's are vulnerable to public attack on SM		
31	I have been subject to abusive comments on Twitter, some of which have been defamatory. This has added stress to my life		
32	Much more casework comes through social media, often making it more difficult to monitor and keep up. It's much easier for constituents and members of the public to contact politicians through social media than conventionally. It means you are constantly contactable and working and it's much more intense. People are also less inhibited and more direct on social media, increasing pressure on councillors.		
33	No. I think it depends on the community you represent as for many face to face contact is still the preferred method of communication. They want their elected officials to be visible.		
34	I don't use social media. Email means that I'm available 7 days each week throughout the year.		
35	Social media means you are never off duty, and is the biggest source of stress		
36	I am expected by some to be available 24 hours a day 7 days a week. It means I've become more contactable but sadly for some members more easily criticised and attacked		

## Appendix 1 – Councillor Survey 2020 - Response Analysis

How has social media, and instant communications such as email, impacted on how you undertake your role and on your life outside the City Council?		Response Percent	Response Total
37	<p>Answered this in a previous question and talked about how if you don't get an instant response things can spiral.</p> <p>The only other significant thing I'd add is that it really adds to my stress and anxiety issues. When negative or challenge comments appear it really starts to affect me negatively at times. This can affect relationships with friends and family.</p>		
38	definitely, instant. Have many contact me via social media		
39	The ability to communicate and receive information through the email system and mobile phone whilst at times being very intrusive on your personal life is I now believe to be essential. Notwithstanding that, unless we ensure that we as well as our officers give them and ourselves permission to switch them off during our leisure time it will lead to stress and anxiety and subsequent physical sickness. We owe it to them and ourselves to take the necessary steps to impose breaks to prevent long term damage.		
40	<p>Email makes things much easier when I was working as I could check things late at night and send emails whenever I could not worrying about disturbing others.</p> <p>Social media was tricky as it meant people could contact me whenever and I wouldn't necessarily be in a position to respond. There is lots of pressure though to have a social media account to be accessible.</p>		
41	Because it is so fast things have speeded up, more to do in less time		
42	I find it difficult not to respond when I receive an email		
43	During covid pandemic it was one of very few ways to replace face to face contact		
44	I am very careful about how I phrase anything		
45	Much more work is done via email now. It makes it easier for me as I work and it means I can do a lot of work outside of office hours.		
46	social media, Zoom, Teams meetings and Emails have become an integral part of life outside the council to the extent that its became an unnegotiated compromise/intrusion.		
47	30% MORE		
48	It has impacted because once posted there is this belief it need to be action or responded instantly regardless of the time of day.		
49	Improved on demand information and communication, made processes faster.		
50	Physical surgeries have become less important as more direct means of communication have become more widely used. Some residents have come to expect a more flexible working pattern is in place that was the case when I was first elected.		
51	Since Covid has impacted and social media has been used more in resident raising issues and communication		
52	Enables me to provide information and pick up issues quickly to resolve.		
53	A lot of people prefer at least an initial contact by email		
54	Social media means I can convey messages to the public and receive comments about local issues more quickly. It also means that I spend many hours, outside of normal office hours interacting with members of the public.		
55	These things are essential for my role as a Councillor.		
56	You are never 'off'. I have not taken any time off completely from my council role due to the fact there residents/stakeholders can always contact you. I also am very careful about what I put online, aware that people are looking.		
57	Previously, letters could take a few weeks to get a response. Constituents expect a response the same day and the ubiquitous use of instant messaging means residents know when you have been online. This leads to a situation where you are 'always on call'. This is better in some ways for residents, but results in a tough work situation for councillors.

Please add a comment: (20)

1	As described, i adjust comms methods depending on lockdown etc. In any marginal ward communication levels have to be high at all times
2	Yes as I get a lot more emails from areas that get the street letters or where we have set up/cooperated on face book etc groups
3	Social media is a great tool, but constituents are often used to using it to contact large companies with dedicated social media teams. There is an expectation of a similar level of service when they contact their councillor. This can make it more difficult to balance dealing with urgent issues. For instance someone might be engaging with me in a lengthy online discussion about why leaves haven't been swept, when I need to spend that time trying to assist someone about to become homeless.
4	I use as many forms of communication as I can, so as few people as possible are left out.
5	Given the pandemic phone and email use has increased, however some older people still need face to face which means communication by letter rather than phone or email.
6	for now - it has to be online and phone
7	for now - it has to be online and phone
8	The communication methods are good but the volume is overwhelming. During lockdown I am working 10-12 hour days on the computer for virtual meetings, webinars, networking and communications yet at the end of most days I have in excess if 40 unread emails...
9	It would be helpful to have Labour Group or Council comms to support ward social media posting with general messaging specific to each ward which would save time chasing and cutting and pasting messages.
10	some times it gets information within a day
11	I think it is important that we make ourselves accessible to our residents and that we do this in whatever way they are comfortable. Residents shouldn't have to make effort to contact us - we should be readily available to help as that is what we're elected to do.
12	Apart from some initial IT problems, I'm happy with equipment and communication systems.
13	I am able to effectively manage a dramatically increased workload by managing social media and emails very effectively. However, this has been developed due to my length of service and understanding of IT
14	Electronic communication is generally more effective than letters and leaflets, a lot of people claim not to have received street letters or leaflets.
15	I like to think I can respond in different , for example will always visit a a issue with an old age pensioner

## Appendix 1 – Councillor Survey 2020 - Response Analysis

**From your experience, do you think the balance of communication methods you are using is effective?**

		Response Percent	Response Total
16	In normal years I meet people face to face when possible, during pandemic phone calls and email have replaced those		
17	There are many channels of communication available how ever the time it takes and the benefit is always the underlining factor.		
18	The world is changing so we must use various methods		
19	The mix of direct communications, newsletters, residents' meetings and physical surgeries seems to satisfy people's requirements for my involvement/assistance with their issues.		
20	I prefer face to face communication		

**In relation to the City Council's submission on council size, are there any other comments you'd like to make or issues you'd like to raise based on your experience as an Elected Member?**

		Response Percent	Response Total
1	Open-Ended Question	101.79%	57
1	No		
2	The pay is not enough and there is not enough time to fulfil the role and earn a living when you have a ward of high casework. There is a very unequal sharing of work.		
3	No		
4	I think where there are 3 active councillors in a ward, the work is manageable as you can share the workload and there are 3 councillors for residents to contact. However, even with just 1 inactive, or less active, member, the workload can become too much.		
5	Councillors in the Core City unitary authorities are unique in being the ONLY layer of elected representation other than the directly-elected Mayors, and national reps (MPs). We have no parish cllrs, no other layer of regional cllrs (eg GLA) and no other layer of local democracy - no district councils etc. We dont even have MEPs now!		
6	Its not a part time job if you do it conscientiously & Chair a committee. I used to spend a lot of time dressing for & travelling to & between 1 meeting to another so I prefer the use of more virtual meetings		
7	Even sharing work with two ward colleagues who are reliable and hard-working, work at ward level alone is a full-time job. Any reduction in the number of councillors and increase in the size of wards would make the work even more difficult		
8	Most councillors are currently working at full capacity. It would be difficult to reduce the number from the current 90, unless the role was made full time. It is important to remember that in a city like Liverpool there are no other tiers of government to take some of the workload (eg Parish councils, county council or regional assemblies). All work therefor falls on City Councillors, including providing scrutiny for the City Region and former County Council bodies such as Police, Fire, Waste and Transport.		
9	I have been a Councillor for a long time now and the work in the ward, due to austerity and then Covid, has increased massively, particularly as my ward has high levels of deprivation and lacks resilience.		
10	My view is that we have the number of elected members correct as we stand. Any reduction would increase the workload still further and make it more difficult for any member to have a second job.		
11	In relation to Old Swan ward this size is about right for 3 councillors for 16,000 residents however for other wards Central, Riverside, they may need one more extra councillor.		
12	the amount of need in the community has risen - and I suspect will grow hugely as the impact on the economy hits hard in 2021		

## Appendix 1 – Councillor Survey 2020 - Response Analysis

In relation to the City Council's submission on council size, are there any other comments you'd like to make or issues you'd like to raise based on your experience as an Elected Member?			Response Percent	Response Total
13	the amount of need in the community has risen - and I suspect will grow hugely as the impact on the economy hits hard in 2021			
14	th access to councillors has significantly increased. the more you do the more people want you to do, the more they demand of you.			
15	I think three councillors a ward should be maintained as it is possible to share the work load better as a team. I think the wards should be more equally balanced in terms of the number of residents in each ward across the city. The ratio of residents to councillors should be reduced to ensure a good level of service and support to residents and high quality representation.			
16	I think as it stands feels about right, 3 members per ward per size as it is			
17	The ward is too big for 3 councillors to fully meet the requirements of the electorate . Greater training is required to understand the functions of the offices and how to work smarter understanding what they do and how long these tasks take.If done properly it's a full time job.			
18	Pressure to respond instantaneously to Facebook comments is high. New resident discussion groups are constantly developing on Facebook. Maintaining a high profile has become essential and resident expectations are significant. Residents are able to share and comment on each other's casework items, and include councillors in these discussions. They appear more aware of their councillors, more eager to approach them and to involve them in discussions. This is welcomed and very positive but has considerably increased our workload.			
19	I think the work under taken by us as councillors has increased a lot in the lasted ten years			
20	My ward is growing, as are several other wards in the south of the city in particular.			
21	No, I think the current size of the council works well.			
22	The caseload and the community activism required to make a difference for people's lives would justify more wards, with smaller electorates and a greater number of councillors.			
23	On average our wards have a population of about 15k. In our case we have two of the 3 Cllrs filling major local govt roles outside the Council in addition to our council duties. To continue to do the amount of work demanded by constituents would mean us giving up these external roles which must be filled by Councillors.			
24	No, I feel the size is right			
25	The amount of case work that councillors get could not feasibly be done with fewer councillors. Residents' issues would suffer.			
26	We work so hard and have seen large cuts to budgets and staff leaving councillors to do the Admin invites ect for walk abouts			
27	I think the Council could do with an increase in some areas. I think any reduction in members would be detrimental to the City. I can honestly say in my ward, we are constantly working and addressing casework. For the bigger areas in the City, an increase in Elected Members would be beneficial. I vehemently oppose in the strongest possible terms any reduction to our numbers as things are already a 'firefighting' exercise as it is.			
28	In practical terms as funding cuts and austerity have lead to a reduction in council services and the officer headcount, as councillors we have naturally seen our work load increase, and thus the time required increase, as we have stepped into the breach. Equally with the impact of deprivation increasing due to cuts the demands have increased significantly also.			
29	With austerity, cuts in funding and the consequences following the Covid emergency I expect the workload of Councillors will increase significantly.			
30	We don't have enough staff			

## Appendix 1 – Councillor Survey 2020 - Response Analysis

In relation to the City Council's submission on council size, are there any other comments you'd like to make or issues you'd like to raise based on your experience as an Elected Member?			
		Response Percent	Response Total
31	The amount of casework is increasing in wards. The role of Councillor is more about facilitation and co-ordination at a ward level, and this has increasing demands on time		
32	I think council size is broadly right and works well. 30 wards results in a manageable workload. Having three members per ward works well as it allows for team work and some specialisation on issues (eg housing issues, planning, environment, schools). It also gives constituents a choice (eg I heard of residents saying there are some issues they'd prefer to disclose to a woman councillor). It also means that if a councillor is on sick leave or Lord Mayor for the year there are two others to manage the work load temporarily.		
33	I don't think anything prepares you for the breadth of work and the amount that is involved in the role. I believe it is unrealistic to reduce the number of wards or elected members and will reduce service to residents.		
34	The job of councillor is non stop and 3 Councillors per ward the size of Childwall is a sensible number. The needs of residents would be more difficult to meet if there were fewer Councillors.		
35	our work load is increasing, therefore the council size should also.		
36	To be honest I believe we need more Councillors not less. Some wards are busier than others but all wards have more IT savvy residents who are reporting more issues and expect members to react quickly, effectively and successfully. The use of social media and emails together with online casework reporting is significantly increasing the workloads of both members and officers. Therefore, Council size should at least stay as is and at best increase for wards with more or increasing levels of issues. Thank you for asking me to submit my comments and answers.		
37	N/A		
38	council is doing a good job, works collaboratively with members.		
39	From my experience going back as a councillor in the 1980's it is clear to me that the support given to councillors from the council has due to cuts diminished considerably. The introduction of new technology and the mobile phone has also led to councillors being available to residents and outside bodies morning noon and night. I can state through experience that in my previous time as a councillor unless I had meetings or surgeries my evenings and week-ends were free without interruption. It was a unusual to even receive a telephone call during the evening or week-end. With the advent of instant communication through new technology and mobile phones the time free from these becomes more imperative for a persons health and well being. How we achieve this is something that I believe is essential in order to attract people to take up the role of local councillors.		
40	I think there are some wards which have a higher demand especially in North end, so when considering ward sizes it needs to consider demographics and not just how many people there are. In the south people are more likely to contact Council directly with issues so demand is less IMO.		
41	The City is growing very quickly with thousands of new homes being built. There is also an aging population that needs our attention in order to maintain independent lives. Despite the reduction in funding residents expect the same level of service. Councillors have to deal with all of these issues and the Council size should not be reduced.		
42	It all depends on the person who is the councillor, you can work 24/7 and be on call or decide that you will contact the problems raised at your convenience , I think most Cllrs do their best		
43	Committee support is lacking for minor parties. It would ease the burden on the councillors if committee support was adequate.		
44	No		
45	I feel that the reduction in officers has increased the work load of Councillors.		
46	It is difficult to set the right number of councillors and number of wards in the city however it is crucial that we don't underestimate the level of need in all wards and especially wards of high deprivation, new and transient community. I believe a minimum of three councillors is a most and where there is evidence of deprivation, joblessness, high mortality rate and an increase in population which would require more		

## Appendix 1 – Councillor Survey 2020 - Response Analysis

In relation to the City Council's submission on council size, are there any other comments you'd like to make or issues you'd like to raise based on your experience as an Elected Member?			
		Response Percent	Response Total
	<p>intervention and support I would argue that there should be four councillors and this would both protect the resident in making sure that there is a proactive approach to the needs and also protect the mental wellbeing and family life of the elected members of that ward.</p> <p>There is a greater strain on councillors with a high demand ward and this is exacerbated if a surge of workload happens as a result of an incident, new ward project or when a newly inexperienced councillor is elected, and needs the coaching by fellow ward councillors.</p>		
47	lack of parking space near to mtgs		
48	We need more Councillors as the city has grown, for the benefit of all residents		
49	<p>Liverpool City Council to give more consultation and notice to issues that affect the Wards of City Councillors.</p> <p>For ward Councillors to not get excluded in any openings or meetings related to Council business</p>		
50	The minority party groups have grown in number in recent years but the Committees support staff has been reduced to <1 FTE. This should be reviewed with the aim of increasing the support available.		
51	<p>The levels of HMOs has increase during lockdown</p> <p>The levels of highways enforcement has decreased</p> <p>Anti social behaviour increased.</p>		
52	The role of being an elected member is challenging to be the first point of contact and resident support request have increased.		
53	Three councillors per ward is a good number given the workload.		
54	As a new councillor I don't think anything can prepare you for the variety of cases which you will deal with. I think councillors would benefit from better access to what council departments exist and what is the role of each department.		
55	I believe that I undertake more than my fair share of casework, as I believe my ward to have a much higher demand than other wards.		
56	I believe that 3 member wards allow for a good break down of work in a comradely way.		
57	The population of Liverpool is increasing. The number of constituents on average is increases in each ward. Resident reliance on elected members in the absence and defunding of other support mechanisms is increasing. Having support from other ward colleagues is vital when we already feel beleaguered. I would be reluctant to change the size of the council.

# Appendix 2 – Technical Report

## 1. Introduction

This Technical Report is intended to provide details of the approach and methodology applied by Liverpool City Council for purposes of forecasting population and electorate change and to in turn inform requirements for democratic representation at a local level as well as the pattern of Wards and geopolitical boundary locations within the area of the city.

Population and Electorate forecasts for 2027 have been calculated using the methodology detailed within this report on the basis that the number and distribution of both population and electors in the city will continue to change during the six-year period 2019-27, based on previous demographic patterns and future projected housing developments.

Wards and Polling District data are presented as follows –

- (i) Current Population (December 2019);
- (ii) Current Electorate (December 2019);
- (iii) Future Population (December 2027); and
- (iv) Future Electorate (December 2027).

Wards and polling district forecasts are presented as current for December 2019 (published January 2020) and future Electorate (as at June 2027), the population aged 17 plus (to show potential Electorate) and the total population (to show potential Councillor caseload).

An explanation of how these figures have been derived is provided within this report, covering –

- ✓ ONS Mid-Year Estimate Data
- ✓ electorate patterns;
- ✓ student and HMO population distribution and impacts;
- ✓ Individual Electoral Registration (IER) impacts and required adjustments; and
- ✓ housing development projections, the latter reflecting already permitted developments as well as development areas formally identified in the Local Plan and appraised in the City Council's Strategic Housing Land Area Assessment (SHLAA), and which are projected to have been constructed and in occupation by June 2027.

# Appendix 2 – Technical Report

## 2. Background

### a) ONS Population Data 2004-2019

ONS Mid-Year Estimates for the period 2004 to 2019 show a consistent trend of population growth as detailed below in Table (a) (i)

Table (a) (i) – ONS Mid-Year Estimates & % Change 2004-2019

	MYE 2019	MYE 2018	MYE 2017	MYE 2016	MYE 2015	MYE 2014	MYE 2013	MYE 2012
Liverpool	498,042	494,814	491,549	487,605	480,873	474,569	471,789	470,191
% Change to previous	0.65	0.66	0.81	1.40	1.33	0.59	0.34	0.97

	MYE 2011	MYE 2010	MYE 2009	MYE 2008	MYE 2007	MYE 2006	MYE 2005	MYE 2004
Liverpool	465,656	461,403	457,523	454,468	453,582	453,055	452,278	448,091
% Change to previous	0.92	0.85	0.67	0.20	0.12	0.17	0.93	-

### b) Calculating Population – Post 2019 mid-year ONS Projections

All eight mid-year estimates released by Office for National Statistics (ONS) since the 2011 Census (up to the 2019 ONS mid-year estimates) have given Liverpool a lower growth trajectory than expected, based on the previous decade's growth and administrative data.

The factors detailed below all impact directly on population growth and distribution within Liverpool but are not reflected within the ONS mid-year projections thereby exacerbating the variance between ONS mid-year estimate and actual population. This in turn results in an artificially low electorate base calculation.

#### EU & Non-EU Migrant Population Movements

ONS projections predict that the net gain/loss for migration (UK and international) unlike the average net gain of 2,500 migrants per annum between 2011 and 2019. However, latest National Insurance Number registrations to foreign workers are at a higher level than any seen last decade, including the years when EU migrants were arriving in the UK in very high numbers. Liverpool hospitals continue to actively recruit from both European and Non-European countries to address vacancies not being met locally.

#### Multi Occupancy Residential Conversions

These typically comprise the conversion of an ordinary dwelling house of a single household to become a dwelling occupied by multiple households with shared communal kitchen, bathroom and amenity space. These conversions are described under the planning process as Houses in Multiple Occupation (HMOs).

## Appendix 2 – Technical Report

Over the past decade, Liverpool has seen a significant rise in the number of HMOs in the City. In part this reflects a demand for accommodation for single person households but is also driven by current national Government welfare changes as well as the lucrative potential yield such conversions may offer landlords (a private landlord can readily generate an income of £450-500 per week through a 5 or 6 bedroom HMO).

Whilst HMOs provide a necessary part of Liverpool's housing market, they can cause significant problems from both a housing and neighbourhood point of view including –

- removing family homes from the housing market;
- creating street level management problems such as car parking and waste collection;
- generating both actual and perceived neighbourhood problems such as anti-social behaviour;
- creating poor quality and poorly managed living environments for some of the City's most vulnerable residents.

All of the above issues require the ongoing intervention and actions of Councillors and results in significant casework and intervention responsibilities falling across large areas of the city. This places yet more demands on the limited capacity of the existing cohort of Councillors.

Critically, the prevalence of conversions results in upwards pressure on population and associated electorates for concentrated geographic areas whilst not being captured within ONS mid-year estimates. This results in inaccuracies in terms of both population size and distribution across the entire city.

An analysis of planning applications and completions, building control notifications and registrations under the former citywide Selective Landlord Licensing Scheme for the period 2015 to 2019 inclusive (5 years) has been utilised for purposes of this report.

This has identified that whilst conversions are evident across all areas of the city, these are concentrated predominantly in the existing wards and polling districts as detailed below –

- Anfield;
- Central;
- Greenbank;
- Kensington and Fairfield;
- Picton;
- Princes Park;
- Riverside; and
- Tuebrook and Stoneycroft; and
- Wavertree.

Evidence also demonstrates significant conversion rates but at a lower order of magnitude in areas of covered by a number of polling districts in the current Kirkdale and Church wards.

## Appendix 2 – Technical Report

This forecast model therefore incorporates adjustment factors to quantify the impacts of conversions on population and electorate based on a robust analysis of existing data as detailed below.

### **Student Developments & Student Population Projection**

Liverpool has a number of housing developments underway and many planned between now and 2027 and indeed beyond. University student numbers are lower than the peak level reached between 1998 (when tuition fees were first introduced) and 2012 (when revisions were made to the tuition fees model), but the number of students living in the city has largely recovered from 51,000 in 2010 to approximately 70,000 in 2019.

This upward trajectory is anticipated to continue albeit at a much more moderate level, reflecting the impacts of the departure from the EU on both EU and Non-EU student populations.

This forecast model therefore specifically incorporates adjustment factors to address the distribution of the student population distribution across the city, with specific reference to existing spatial planning data and planning permissions for those areas, which have concentrations of student populations.

### **School-Age Populations – Impacts on IER**

The number of resident pupils recorded on the School Census has risen annually since 2010. Taken together, it is reasonable to assume a higher growth trajectory than projected by ONS.

## **c) Liverpool City Council Forecast Model (LCCFM)**

In order to provide robust projections for purposes of the Boundary Review process, Liverpool City Council has developed and utilised a Forecast Model, which combined ONS Mid-Year Estimates data with qualitative and quantitative data analysis and projections taking into consideration the following factors –

- Housing & Residential Development Projections;
- Multi-Occupancy Residential Development & Conversions; and
- Population Distribution.

The above factors are explained in detail below and in the accompanying Annexes to this Technical Report, including data sources and methodology applied.

In relation to the above factors, these are included in order to take realistic account of administrative change at neighbourhood level during the period utilising the established ONS data projection model combined with specific local considerations. This is because:

- ONS projections are only at district level and there are significant differences in demography across Liverpool;

## Appendix 2 – Technical Report

- Liverpool's population was undercounted in the 2011 Census (acknowledged by ONS);
- The revised methodology that undercounted Liverpool before the 2011 Census has been used nationally on estimates and subnational population projections since 2011. Without adjustment this consistently underestimates actual population and in turn exacerbates statistical discrepancy year on year; and
- Liverpool, as Liverpool City Region's economic hub, with two core universities and a number of second tier Higher and Further Education establishments offers abundant available, affordable rental stock (unlike London). Combined with the pull-factor of established Black and Minority Ethnic (BAME) communities, the actual population of the city is adversely affected by the current ONS methodology. There are a number of other towns and cities with similar issues including that of comparable core cities such Manchester, Newcastle and Leeds.

# Appendix 2 – Technical Report

## 3. Methodology

### a) Overview

Subnational population projections are released at district level only, for the purposes of electoral boundary calculations this is inadequate. Using ONS ward distribution from mid-year estimates projected forward would not take into account specific local factors influencing population distribution and growth, as detailed below.

Liverpool City Council's forecasting model for purposes of this review uses the ONS Mid-Year Estimates as a base reference point, to which factor adjustments as detailed below are applied. All factor adjustments have been developed and informed using historic local data from a wide range of sources, to inform, enhance or change the likely future population at polling district and ward levels.

### b) Calculating the 2027 Population & Electorate

For purposes of the Boundary Review process, the LCCFM has been used to estimate the 2027 total population and the 2027 population aged 17 and over by polling district, as well as by Ward using current boundaries.

#### Electorate

A comparison between the December 2019 electorate (published January 2020) and the 2019 ONS mid-year population estimate proportion of registered electors to population aged 17 and over has been used as a starting point for calculating the expected 2027 electorate. The June 2013 proportion of registered electors to population aged 17 and over in ONS mid-year estimates has been used to represent pre IER levels. This date and figure are used as being closest to the last election prior to the implementation of IER.

ONS mid-year estimates have been used because these represent a consistent baseline methodology utilised across the UK and is therefore beneficial for purposes of the review process in aiding the work of both LGBCE and the City Council in quantifying specific local adjustment factors and how these translate into more accurate population and electorate forecasts.

#### Housing Development Projections

The Council's Residential Development Pipeline figures derived from the Strategic Housing & Land Area Assessment (SHLAA) and population forecast have been compared to confirm the two are aligned throughout the timeline modelled. This approach recognises that growth in the city – both economic and population – will not be distributed evenly. This is borne out by the current inequality in electorate per Ward, which has developed since the last review of 2004.

Future approved housing development have informed the distribution of residents in wards from 2019 up to 2027 by redistributing migration within wards in relation to the expected average household size and type of proposed units

## Appendix 2 – Technical Report

(as detailed in this methodology. As part of this comparison, an allowance is made for unimplemented approved Planning, which is fixed at 10% reflecting an analysis of Planning Applications submitted for the period 2015 to 2019.

MOSAIC geo-demographic profiling at household level as at 2019 has been used to determine the age and sex of residents in each ward for those aged over 17 (adjusting for postgraduates if necessary) from 2019. Proposed housing has not increased the resident population other than if the housing is in a ward with a higher fertility rate there may be a greater increase in babies than in one with a low rate; it has been used only as a guide to redistributing the population based on how much new housing is proposed in each Ward.

### **Population Distribution, Adjustment Factors & Methodology**

The following factors have been taken into consideration when modelling population and electorate projections across the city –

#### **(i) Individual Electoral Registration (IER)**

Predicting the electorate in 2027 is challenging because the introduction of IER has fundamentally affected registration rates since its introduction in June 2014. In June 2013 (pre-IER), the registered electorate in Liverpool was 323,365. In June 2014 (post IER), it was 317,561, and this despite a European and local elections taking place at which we will always see a significant increase in voter registrations.

Despite a large number of properties and students halls of residence being built in the city centre the number of registrations didn't show any significant increase over the next few years.

Further changes to legal requirements associated with electoral registration took place during early 2016, in the form of a requirement to review and deletion of electors who have moved property but also at the same time the addition of new electors in the city. This resulted in a registered electorate at June 2016 of 318,727 despite just having had three combined elections City Mayor, Police & Crime Commissioner and Local Councillors which would have had an upwards pressure on registration trends in previous months.

IER has a disproportionate impact on both transient and multiple occupancy residents, which for purposes of this Technical Report are taken to comprise Student Residential Accommodation and Houses in Multiple Occupation. These residential types are specifically assessed below.

It is difficult to predict in the long term what will happen to registration rates as a consequence of IER. However, based on current evidence and patterns of registration it is unlikely that the wards most affected by IER will see registration rates recover to pre IER levels. These are areas of significant population churn where there is a high volume of frequent

## Appendix 2 – Technical Report

movers who are not always re-registering at their new addresses, and also students, who either do not register to vote when they arrive in the city or do but then do not keep their registrations update to date when they move.

This is therefore addressed in the adjustment methodology set out below.

### Adjustment Methodology

In recognition of the impacts of the above factors collectively on electoral registration post IER, a method has been devised to reflect that there will be some return to pre IER levels of registration but that this will occur unevenly across the city depending on the factors already outlined.

The relative percentage point change between pre and post IER electoral registration has been calculated for each Ward and polling district, and are set out at Annex E to this Technical Report.

A graduated increase has been determined such that those Wards with a difference in registration rate greater than 10 percentage points will not recover at all and those with a difference of 5 to 10 percentage points will only recover slightly, by 5%.

For wards with a small drop in rates between pre and post IER, those with a difference between 2 and 5 percentage points will recover by 40% and those with hardly any difference, less than 2 percentage points, will return back to pre IER levels as summarised in the table below –

**Table b (i) (a): Graduated method used to determine recovery to pre IER registration rates**

<2 %points difference between pre and post IER rates =	revert to pre IER % by 2027
>2 but <5% points difference	= revert 40% back to pre IER level
>5 but <10% points difference	= revert 5% back to pre IER level
>10% points difference	= remain at post IER % level

The results using this method is a forecast for Liverpool future electorate in 2027 of 365,505 with an underlying population of residents aged 17 and over of 466,894 and a total population of 569,583.

## Appendix 2 – Technical Report

### (ii) Student Residential Development

Students currently represent approximately 10% of the resident population, these being predominantly clustered in the following Wards and polling districts, predominantly in purpose-built residential accommodation –

**Table b (ii) (a) wards with the highest numbers of completions purpose built student residential accommodation 2015-20**

Period	Ward	Total Student Bedspaces Completed
2015-20	Central	3658
2015-20	Everton	640
2015-20	Riverside	288
2015-20	Princes Park	260
2015-20	Picton	118

When comparing the list of Wards at Table b (ii) (a) above with the data set out at Table D1 in Annex D to this Technical Report - illustrating pre and post IER percentage variation by Ward and polling district - it is evident that certain Wards and polling districts have been particularly negatively affected by the introduction of IER, thus establishing a direct correlation.

These are also the Wards and polling districts where there is a prevalence of purpose built student accommodation and have seen a combination of frequent movers and these areas account for more than a third of resident students in the city. Residential developments projected for these areas are, by virtue of their scale and location as well as pre-approved or in-progress planning application, anticipated to see further student accommodation constructed during the period to which this review relates.

This is therefore addressed in the adjustment methodology set out below.

#### Adjustment Methodology

In relation to those Wards and polling districts identified at Table (b) (ii) (a), the Council's Residential Development Pipeline figures derived from the Strategic Housing & Land Area Assessment (SHLAA) and population forecast has been compared to confirm the two are aligned throughout the timeline modelled.

For those Wards (including all polling districts) identified at Table (b) (ii) (a), it is projected that the larger scale development sites identified in the SHLAA will be built out as student residential accommodation. This is also consistent with previous approvals as well as current application submissions.

On this basis, the size and location of development sites within these Wards and polling districts have been cross referenced with data on approved and constructed planning permissions for the period 2015 to

## Appendix 2 – Technical Report

2019. This in turn has enabled projections for the anticipated size and occupancy of each development to be projected through this methodology. As part of this comparison, an allowance is made for unimplemented approved Planning permissions, which is fixed at 10% reflecting an analysis of Planning Applications submitted for the period 2015 to 2019.

### (iii) **Residential Conversions to Multi Occupancy Dwellings**

An analysis of applications for the licensing of premises for purposes of multiple occupation (up to 6 individual occupiers) and those of 7 occupiers and above under the Planning process – by Ward and Polling District – has been undertaken for the period 2014-2019. This analysis identifies that whilst all Wards have evidence of some conversions, the following Wards the most demonstrable ongoing trend of conversions –

- Anfield;
- Central;
- Greenbank;
- Kensington and Fairfield;
- Picton;
- Princes Park;
- Riverside; and
- Tuebrook and Stoneycroft; and
- Wavertree.

This is therefore addressed in the adjustment methodology set out below.

#### Adjustment Methodology

An analysis of planning applications and completions, building control notifications and registrations under the former citywide Selective Landlord Licensing Scheme for the period 2015 to 2019 inclusive (5 years) has been utilised for purposes of calculating an adjustment methodology.

The adjustment methodology has been applied in respect of those areas identified through independent studies commissioned by the City Council and undertaken by ARUP, which identifies the following existing Wards and polling districts as detailed below anticipated to see further conversions –

- Anfield;
- Central;
- Greenbank;
- Kensington and Fairfield;
- Picton;
- Princes Park;
- Riverside; and
- Tuebrook and Stoneycroft; and
- Wavertree.

## Appendix 2 – Technical Report

Evidence also demonstrates significant conversion rates but at a lower order of magnitude in areas of covered by a number of polling districts in the current Kirkdale and Church wards.

The analysis of data for the period 2015-2019 (five years) has identified an overall number of dwelling extant for each Ward and polling district, in parallel with numbers of occupants projected for each dwelling as extrapolated from ONS mid-year estimates. This is then supported by quantitative analysis of the numbers of conversions already extant and number of households in each multi-occupancy dwelling.

In order to verify the accuracy of data, further comparative analysis and cross-referencing has been undertaken using BRE Group Stock Condition Survey as a baseline reference for stock status and occupation as at 2018 which from this point was also capable of breakdown into Ward and Polling District Level.

Analysis of conversions undertaken during the review period 2014-2019 demonstrates the average occupation of each conversion as at 6.8 – as such a representative occupancy of 6 has been applied as part of the lineal projection model.

Combining data produced through the above analysis processes has involved using Realyse data for granted HMO conversions together with the numbers of completed each year to inform a lineal projection forecast up to 2027. Noting the impacts of policy change, a deduction on the percentage rate of conversion of 30% has also been applied, further details of which are given below.

Note that each bedroom within a multi-occupancy dwelling is occupied by an adult of aged 17 and over – this is therefore similarly reflected in IER assessments.

For example the conversion of an existing 3 bedroom single dwelling occupied by 2 adults and 2 children. A conversion to a 6 bedroom HMO will see a net gain of 2 in terms of population, but a net gain of 4 in terms of electorate.

In terms of the distribution of projected conversions within existing Wards and polling districts, this has been applied to dwellings on roads where conversions have already taken place.

Prior to applying the adjustment factor, a reduction of 30% has been applied to the rate of conversion projected for each Ward and polling district. This reflects the following criteria –

- allowance is made for unimplemented approved Planning permissions for conversions, which is fixed at 10% reflecting an analysis of Planning Applications submitted for the period 2014 to 2019; and
- allowance of 20% is made for the implementation of the Local Plan

## Appendix 2 – Technical Report

and associated policies – including the adoption of Article 4 Directions, which are projected to reduce the rate of conversion across all areas of the city.

### **Polling District level**

Polling district geographies are operational in the delivery of elections and do not align to any statistical boundaries used by ONS.

In order to enable polling district allocations as required by the Boundary Commission, the analysis conducted at ward level has been extended to polling district level. This is a two stage process –

1. estimating the current population aged 17 and over at polling district level; then
2. estimating the 2027 electorate and population at polling district level.

The count of a polling district's electorate as a proportion of the overall count in its ward has been calculated as of December 2019. These proportions have then been applied to the 2019 Ward population aged 17 and over to establish a population at polling district level, assuming a direct relationship between electorate size and underlying population size.

Future growth in population and electorate, however, will not be evenly distributed within a ward so using 2019 proportions for 2027 will not produce realistic results.

The predominant factor in changing the distribution of electorate and the underlying population will be the location and types of residential housing development (including the conversions of existing housing stock to multiple occupancy use), assuming that polling districts with additional housing are more likely to increase in population.

To calculate the expected electorate and population at polling district level in 2027, the total number of additional proposed housing units in each polling district from 2019 to 2027 has been identified using spatial analysis and worked out as a percentage within each ward. The results have been used as a proxy for population distribution, applying them to the increase in electors and increase in population aged 17 and over in each ward to establish the spread of a ward's growth within its polling districts.

# Appendix 2 – Technical Report

## 4. Summary & Recommendation

The distribution of Liverpool's electors and population aged 17 and over at ward and polling district levels in 2019 and 2027 are detailed in the Annexes to this Technical Report.

The methodology used should provide estimates that are timely and improve on those that are available nationally at city level. Ward level population has been derived using software designed specifically for forecasting and has been subject to a peer review.

Liverpool City Council recommends that the Liverpool City Council Projection Model outputs and methods are used in this electoral review and extend an invitation to the Local Government Boundary Commission for England to discuss this further if this approach needs clarification.

## Annex A

### 2019 Population & Electorate

The estimated 2019 total population and the population aged 17 and over are shown in **Table A1** alongside the published electorate for December 2019 (published January 2020). The average 2019 ward population is 16,601, an average population aged 17 and over of 13,551, and the average ward electorate is 10,900. This gives a ratio of around nine electors to every 10 residents aged 17 and over.

**Table A1: 2019 populations by ward and registration rates**

Ward	Population mid-2019 - All Ages	Population mid-2019 - 17+ years	2019 Electorate	% Variance between electorate and 17+ pop'n estimate

## Annex B

### Variance from the Average Electorate June 2020

According to the Boundary Commission's definition, variance from average is significant if more than 30% of an authority's wards have an electoral imbalance of more than 10% from the average for that authority; and/or it has one ward with an electoral imbalance of more than 30%. Liverpool had a ward average of 11,401 electors in June 2020 but there were a number of wards that were considerably above or below average.

**Figure B1** shows the variance from the city's ward average for Liverpool's electorate at June 2020.

There is imbalance in eight wards, four with variance that is more than 10% above average and four which are 10% below average.

The current Riverside Ward has the greatest variance from the average electorate in 2020 and as such meets the definition of variance from average set out by the Boundary Commission.

**Figure B1: Published electorate by size by Ward, June 2020 compared with Projected 2020 17+ Population**

## Annex C

### Liverpool City Council Forecasting Model (LCCFM) – 2027 Population Projection & Electorate Projection (Ward & Polling District Level)

**Table C1** shows the estimated population in 2027, the population aged 17 and over and an estimate of electorate numbers assuming that individual electoral registration (IER) becomes more established.

**Table C1: 2027 populations by Ward**

<b>Ward</b>	<b>2027 Estimated Total Population</b>	<b>2027 Estimated final 17+ Population</b>	<b>2027 Estimated Electorate</b>
Allerton and Hunts Cross	14,724	11,622	10,960

<b>Liverpool</b>	<b>569,583</b>	<b>466,894</b>	<b>365,508</b>

Source: LCCFM

The forecast electorate for 2027 is **365,508** if there is a **partial return** to pre IER levels, using the graduated uplift outlined earlier.

The average 2027 ward population for all ages is estimated at **18,986** and the ward average for those aged 17 and over is **15,563**. The average ward size of the electorate by 2027 is **12,184** based on the current 30 wards.

The ward distribution of the population aged 17 and over and the electorate at 2027(with uplift) are illustrated in **Maps C1 and C2**, highlighting that wards (pre-review boundaries) around the extended City Centre are significantly above average.

**Table C1 previous page above** shows the 2019 population and electorate for each Ward and Polling District together with the associated projected population and electorate (aged 17 and over) as at 2027. The electorate and population aged 17 and over at polling district level in 2027 are calculated using the distribution of new housing and conversions as well as housing type factors in each polling district, as outlined earlier in this Technical Report.

**Table C2: Published electorate by polling district in 2019 and estimate for 2027**

## Annex D

### Impacts of Individual Electoral Registration – Comparison Data

In June 2013 (pre-IER), the registered electorate in Liverpool was 323,365. In June 2014 (post IER), it was 317,561, and this despite a European and local elections taking place at which we will always see a significant increase in voter registrations. Table E1 illustrates as a percentage the impacts of IER on electoral registration across all Polling Districts

**Table D1 – By Polling District comparison and percentage impacts of electoral registration**

## Annex F

### Residential Development Projections 2019-2027

**Table F1** shows the forecast residential pipeline by ward from 2019 to 2027, based on housing supply data from Liverpool's Strategic Housing Land Availability Assessment (SHLAA). The forecast is made up of residential schemes, which are under construction, sites with planning permission where work has not yet started as well as additional sites that have the potential to accommodate residential development over the next 7 years (sites expected to deliver in excess of 10 units only).

**Table F1: Residential pipeline housing schemes – estimated additional population by 2027**

Ward	Estimated additional population due to developments by 2027
Allerton and Hunts Cross	321
Anfield	42
Belle Vale	35
Central	10,637
Childwall	38
Church	134
Clubmoor	34
County	20
Cressington	113
Croxteth	2
Everton	1,834
Fazakerley	19
Greenbank	137
Kensington and Fairfield	846
Kirkdale	8,322
Knotty Ash	5
Mossley Hill	206
Norris Green	0
Old Swan	24
Picton	327
Princes Park	161
Riverside	6,061
St Michael's	1,757
Speke-Garston	856
Tuebrook and Stoneycroft	167
Warbreck	82
Wavertree	83
West Derby	2
Woolton	117
Yew Tree	395
<b>Liverpool</b>	<b>32,773</b>

**Chart F2 below** provides a hierarchical visual representation of how residential developments between 2019 and 2027 will reflect in terms additional population based on current Ward boundaries, for illustrative purposes.
